61315113	105mm (4")	14,500

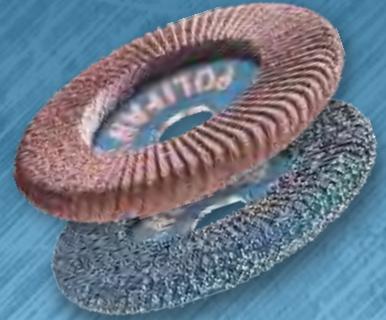

# PFERD - Market Leading Innovation

**Aluminium Ultra-Thin**  
Thin cut-off wheels for aluminium

**DUODISC®**  
Thin wheels that Cut & Grind

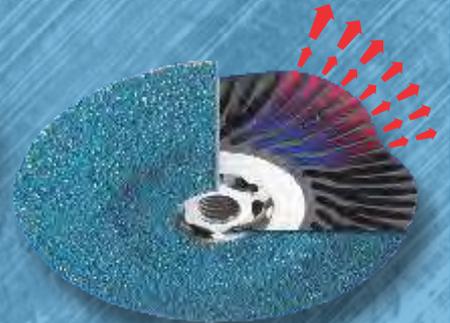

**POLIFAN® CURVE**  
Grind fillet welds & hard to reach areas with one wheel

**POLIFAN® STRONG**  
The ultimate high stock removal grinding flap wheel

**CC-GRIND® - SOLID**  
A NEW generation of grinding wheels. Less noise, dust & vibration

**COMBICLICK® system**  
Unique backing pad with a large range of different fibre discs

## VERTRAU BLAU

Trust In The Blue

Workers around the world trust in the blue and choose PFERD. The combination of individual consultation, innovative high performance products and on-site experience, have made PFERD into a recognised brand for quality abrasives.

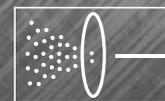

## PFERDERGONOMICS®

Do Not Use If Damaged

Specification may change without notice. All statements, technical information and recommendations contained in this document are based on tests or experience that PFERD believes is reliable. However, many factors beyond PFERD Australia's control can affect the use and overall performance of a PFERD product in a particular application, including conditions under which the product is used and the time and environmental conditions in which the product is expected to perform. Since these factors are uniquely within the user's knowledge and control, it is essential the user evaluate PFERD Australia's product to determine whether it is fit for a particular purpose and suitable for the user's method of application.

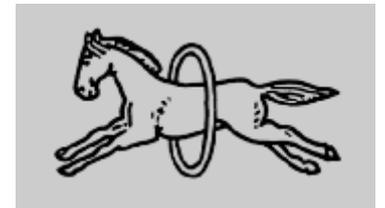

## Tradition, Progress, Innovation

The company started producing files over 200 years ago. Since then, this family owned company has become one of the leading manufacturers in the tool industry. Innovative ideas and products are the key to success.

## The 'PFERD' Brand

The term PFERD means 'horse' in German, and from the very beginning the "jumping horse" has been a distinctive brand known for excellent quality, top performance and efficiency. It symbolises strength, endurance and reliability.

## VERTRAU BLAU - Trust In The Blue

Workers all over the world trust PFERD. This trust has been earned by the many people connected with PFERD. The unique combination of individual, target-oriented consultations and innovative high-performance tools with the skills of on-site users always guarantees customers the optimum, most economical result for every task. PFERD partners and distributors trust PFERD because the company offers innovative tools and training for safe ergonomic work in addition to its sound consultation service, making work more precise, easier and faster.

## PFERD - Used In Industries

- Chemical and process industry
- Equipment, tank & pressure vessel constructions
- Steel mills, foundries
- Tool, die and mouldmaking
- Pipeline construction
- Shipyards
- Automotive
- Structural steelwork and metalworking
- Aerospace applications, gas turbines (fabrication and maintenance)
- Mechanical engineering
- Manufacturing

## PFERD - Wide Range Of Applications

- Cutting
- Grinding
- Milling
- Filing
- Brushing
- Polishing
- Cleaning
- Rust removal
- Deburring
- Matt finishing

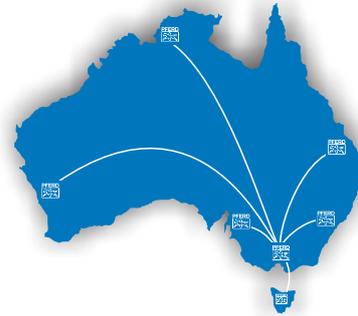

**VERTRAU BLAU**  
Trust In The Blue

## PFERD Australia Pty. Ltd.

Active in Australia for over 30 years, PFERD has gained a reputation as a leading manufacturer of abrasive solutions. With more than 7,500 products, product training, technical support, national warehousing and Australia-wide service, we can offer the complete solution for your needs.

## Technical Know-how

The PFERD team of technical experts work in the field to find the best solutions for your tasks on site. PFERD products are "oSa" approved and comply with Australian standards, offering you the greatest level of safety.

## Professional Training & Advice

PFERD offers professional and practice-related training courses that are the foundation for mutual success. We explain how to use PFERD products to maximise production whilst minimising costs. We advise on the correct selection and use of products to maximise safety while minimising product costs and down-time. On site training is also available.

## Safety & Standards

Safety is key when working with abrasive products and PFERD is your partner for safe tools. As a leading manufacturer of abrasive tools, PFERD meets all the requirements of national and international laws, standards, codes and guidelines. The PFERD quality management system is ISO 9001 certified and guarantees compliance with all regulations. The "oSa" label certifies that a given product has been manufactured to the most stringent standards in force anywhere in the world today. PFERD grinding and abrasive cut-off wheels carry the oSa label.

## Commitment to Service

PFERD employees are here to help you. We are dedicated to advising you professionally and completing your order reliably. We place great emphasis on personal contact with you and building long-term business relationships.

## PFERD - Product Guide

Easily find the abrasives to suit your application. The next pages contain an index and overview of each product range available from PFERD Australia. All pricing is each and excluding GST. Prices and specifications are subject to change without notice.

# PFERDVALUE®

## PFERDERGONOMICS®

**Vibration** Filter

Users of hand-held tools are exposed to a significant degree of mechanical oscillation. The effects of these oscillations may include decreased performance and adverse health effects.

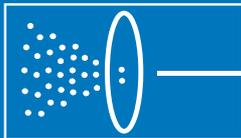

PFERD tools and tool drives with the '**VibrationFilter**' pictogram cause substantially fewer vibrations than comparable products.

**Noise** Filter

Noise at the workplace can become an issue. Depending on the job and personal perceptions, noise at work may be bothersome, disruptive and may even pose a danger to health.

The '**NoiseFilter**' pictogram identifies PFERD tools and tool drives that have been optimized in terms of their noise emissions, and which pose a reduced risk of damage to users' hearing.

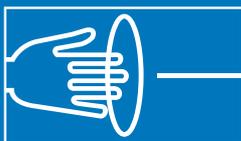

**Emission** Filter

The air quality in work areas is adversely affected by dust. Not only does the pollutant content constitute a health hazard, but the size of the particles may also create issues. The smaller they are, the greater the health hazard.

PFERD tools which create less dust than other products when used are marked with the '**EmissionFilter**' pictogram.

PFERD's oil-free air grinders cause lower emissions, and also carry the '**EmissionFilter**' pictogram.

**Haptic** Filter

The word 'haptics' is generally associated with touch and mechanical stimuli. PFERD takes this definition a step further. When using tools, it is important that the work is carried out with the lowest levels of force and effort, with a high amount of control, and with as much comfort as possible.

PFERD tools and tool drives with the '**HapticFilter**' allow for labour-saving, ergonomic work with minimal effort.

## 201 - Files

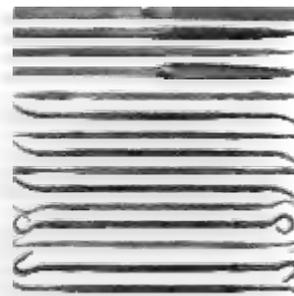

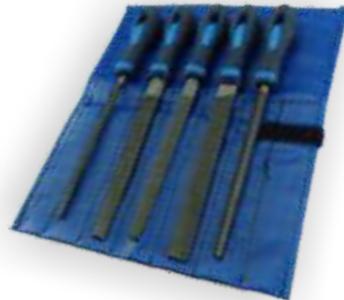

For 200 years, PFERD files have been renowned worldwide as a top quality product. With their consistently high cutting performance, ensuring an excellent surface quality even after long use, they reduce the cost of labour-intensive manual work. PFERD has developed a number of ideal shapes and cuts for specific applications in industry and the crafts.

### File types available

- Files for the workshop
- Precision files
- Sharpening files
- Wood files and rasps
- Chain Saw files
- File handles, file sleeves, file brush
- Milled tooth files

PFERD stamp

## 202 - Burrs & Hole Saws

### Burrs - Tungsten Carbide

PFERD burrs are designed for machining materials of virtually any strength. Our burrs provide exceptional impact resistance, minimising tooth chipping & breaking. Available in a variety of shank diameters to suit your tool or application.

Need a high impact resistant burr for those tough applications? The Cut TOUGH and TOUGH-S range are very durable, minimising tooth breakages and chipping when used in tough applications such as steel fabrication, foundries and dockyards. Cut ALU developed for aluminium and coarse grinding work on non-ferrous metals. Cut INOX has been developed for those INOX stainless steel applications. Cut MICRO is designed for exceptional results at very high RPM speeds. Cut STEEL developed for all mild steel applications.

### Specialty Cuts

### Hole Saws - HSS Bi-Metal

PFERD HSS 'high speed steel' Bi-Metal hole saws can be used for cutting steel, stainless steel, aluminium, cast iron, copper, wood, plastic and many other materials. The alternating tooth pitch prevents chattering during use. Select from a wide range of sizes or popular sets. Hole saw arbors and accessories are available separately.

#### Individual Hole Saws

Available in sizes 14mm to 152mm.

#### Quick Change Hole Saw Mounting System

Includes quick change unit with special adaptors to suit the hole saw of your choice

#### Hole Saw Kits

Available in 7, 9 and 13pcs kits. The sets are neatly arranged in a protective plastic box.

## 203 Mounted Points

PFERD offers a very extensive line of vitrified and resinoid-bonded mounted points. Designed to meet individual application needs, these products come in a broad range of grain types, grit sizes, hardness levels and shapes. The mounted points are manufactured on advanced production lines to high standards of dimensional accuracy and stability, consistent quality and close tolerances.

### Available Sets

- 10pcs Assorted Points (6mm Shank)
- 15pcs Assorted Points (3mm Shank)
- 100pcs Assorted Points (1/4" Shank)

## 204 Fine Grinding & Polishing Tools

Achieve the perfect end result with every job. PFERD's 204 range suits stainless steel, aluminium, plastic and many other materials. We can help you to find the right fine grinding and polishing tool to suit the application. For more information on the complete range of fine grinding & polishing items contact PFERD.

## 205 Diamond & CBN Tools

PFERD Australia offers a range of diamond and CBN products that includes specialty files and diamond grinding points. In addition to this range PFERD also specialises in the customer specific manufacture of electroplated, resinoid, ceramic and metal bonded diamond and CBN tools.

Advantages of using diamond include: superior product life and dimensional stability as well as avoiding thermal damage to the workpiece due to low grinding temperatures.

### Diamond Product Range

- Cut-off wheels
- Cup wheels
- Drills
- File Sets
- Handy files
- Needle files
- Grinding Points

## 206 Grinding & Cut-Off Wheels

PFERD offers an outstanding range of quality cutting and grinding products. Years of experience working with different industry applications has led to the development of new items that suit today's requirements. Unique products like the POLIFAN® Curve, the POLIFAN® Strong, DUODISC® and the COMBICLICK® range, have changed working with metal as you know it. Note, discs are also colour coded to suit different materials.

### Grinding Wheels

A range of sizes and types to grind steel, cast iron, stainless steel (INOX) and aluminium.

### Cut-Off Wheels

A range of sizes, types & thicknesses from 0.8mm to cut steel, stainless steel (INOX), aluminium and stone.

### Polifan® (Flap Discs)

A wide range of grinding flap discs suit steel, stainless steel (INOX), aluminium and more. Try the POLIFAN® Strong for high stock removal & POLIFAN® Curve for fillet weld applications.

### DUODISC®

An amazing 2 in 1 grinding disc that can be used for cutting as well. Sizes 4", 4 1/2" & 5", 6" & 7". In 1.9, 2.8 & 3.5mm thickness.

### COMBICLICK® GRIND & FINISH METAL

#### 1 Mounting System

#### 2 Fibre Disc

### CC-GRIND-SOLID GRIND METAL New Grinding Disc

# 207 Large Diameter & Cut-Off Wheels

PFERD large diameter cut-off wheels are available for use on a wide variety of cutting machines to suit all steels, cast iron, non-ferrous metal alloys and special alloys. PFERD large diameter cut-off wheels provide easy cutting of steel that cannot be sawn or flame cut. The cutting quality is consistent over the entire cut-off wheel lifetime until it is completely used, due to the continuous self-sharpening process. A more cost effective option than any other cutting procedure.

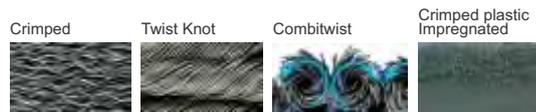

## Large Diameter Cut-Off Wheels Range

- Low speed general purpose and premium wheels - 80mtr/sec to suit 240v chop saws (steel & INOX)
- High speed large diameter cut-off wheels - 100mtr/sec to suit 3 phase saws
- High speed portable cut-off wheels to suit portable engine driven saws (steel, stone & rail)

# 208 Industrial Power Brushes

PFERD industrial power brushes are quality products used for surface machining. We offer a comprehensive range of high quality brushes in both INOX or mild steel to suit professional brushing of various materials and applications.

## Shaft Mounted & Specialty Brushes

KBG Flared Cup Brushes

Cup Brushes

Wheel Brush To Suit M14 Thread

Bench Grinder Wire Brushes With Arbor Hole

RBG Wheel Brush

Pipeliner Brushes

POS Range

Hand Scratch Brushes

## 209 Tool Drives

The PFERD product range also includes both air and electric powered tools for hand held applications such as grinding, milling, brushing, cutting and polishing. One of the most important factors that helps you to achieve cost effective working methods is selecting the correct tool. PFERD offers high quality units to suit most metal working applications.

### Air Tool Range:

- Marking / Engraving Pen
- Straight Pencil Grinders
- Right Angle Die Grinders
- Straight Die Grinder
- Angle Grinder

### Electric Tool Range:

- Straight Grinders
- Pipe Belt Grinder
- Drum Grinder
- Angle Grinder
- Multi-Speed Mammoth

## Coated Abrasives

### Paper & Cloth Backed Abrasive Products

PFERD offers a wide range of coated abrasives, covering made-to-order products that best suit your application or alternatively you can choose from a variety of standard stocked lines.

Find the most cost effective option with PFERD. Our abrasive specialists can help you to identify the most suitable abrasive product from our range of aluminum oxide, zirconia, ceramic and diamond materials. We also supply accessories including backing pads, belt restorers, slip cloth, sanding sponges and much more.

### Metalwork

### Woodwork

### Metal

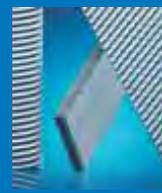

- Portable Belts
- File Sander Belts
- Stroke Sanding
- Coil Grinding
- Backstand Grinding
- Dome Grinding
- Flat Bar Grinding
- Pipe & Tube Grinding
- Roll Grinding
- Sheet Grinding
- Turbine Grinding
- Centreless Polishing
- Flat Bar Polishing
- Metal Polishing
- Robotics
- Multi Tool Belts
- Discs Grinding & Finishing
- Pattern Making

### Wood

- Portable Belts
- Stroke Sanding Belts
- Wide Belts
- Polyvacs
- Edger Discs
- Floor Sanding Belts
- Drum Grinding
- Edge Grinding
- Profile Radius Grinding

Contact PFERD for items to suit special applications or for more information regarding belts made to order

For 200 years, PFERD has been manufacturing files of a world-renowned high quality. Many years of experience as a tool manufacturer have led to the steady development of PFERD files.

Application-oriented file shapes and cuts for industry and crafts guarantee good economic value. Even after long use, PFERD files achieve high stock removal rates and an excellent surface quality.

State-of-the-art production technology and strict quality controls guarantee the outstanding PFERD quality.

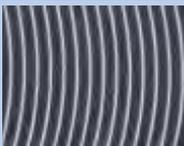

PFERD is certified according to ISO 9001.

<b>Cut 2</b>		<ul style="list-style-type: none"> <li>■ Cross cut</li> <li>■ Suitable for medium to fine precision work</li> </ul>
<b>Cut 3</b>		<ul style="list-style-type: none"> <li>■ Cross cut</li> <li>■ Suitable for fine precision work</li> </ul>
<b>Cut 4</b>		<ul style="list-style-type: none"> <li>■ Cross cut</li> <li>■ Suitable for very fine precision work</li> </ul>

### Several criteria determine the quality of a PFERD product

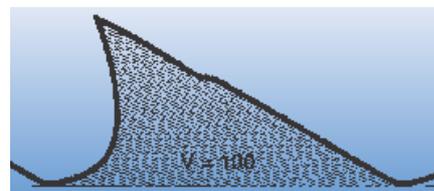

#### An appropriate steel microstructure, essential for uniform hardness

The various production steps (profiling in the rolling mill, shaping of blanks and tangs, annealing processes prior to cutting, final heat treatment) each cause a change in the microstructure of the steel. Throughout these treatments, it is essential to maintain a high carbon content to ensure the requisite hardness and cutting performance of the file.

#### Exact shape and uniform cut from tang to tip

Blanks acquire their exact shape, indispensable for an appropriate performance, through a series of forging and grinding operations. Equally spaced teeth and a uniform depth of cut ensure good fling results and surface finishes. The type and angle of the cut depend on the purpose for which the file is intended.

#### Ideal tooth geometries for every application

Tooth forms suitable to a particular application ensure a uniform stock removal capability. There is no such thing as a standard tooth shape. Different cut geometries have been derived as the optimum solution to a variety of applications. The illustration shows a car body file profile with its typical rounded tooth face and large interspace.

The number of teeth of PFERD files listed in our catalogue 201 conforms to DIN 8349 requirements. The figure shows the number of cuts per cm of file length, counted in the longitudinal axis. For a double-cut file, the teeth number is determined by the upper cut (second course).

### Number of teeth per cm of cut files according to DIN 8349

Length (without tang) [mm]	Machinist's files Cut numbers ± 8 %			Sharpening files Cut numbers ± 5 %					
	Cut 1 Bastard	Cut 2 2nd Cut	Cut 3 smooth	Regular	Slim	Extra slim	Double extra slim	Mill Saw Files	
								Cut 1	Cut 2
100	17	22	28	20	23	26	–	–	–
125	–	–	–	19	22	24	25	–	–
150	13	18	22	17	20	22	24	20	24
175	–	–	–	16	19	21	23	–	–
200	10	14	18	15	17	20	22	18	20
250	9	12	16	14	16	17	–	16	18
300	8	11	14	–	–	–	–	14	16
350	7	10	13	–	–	–	–	12	14

Cut 1 = coarse / Cut 2 = medium / Cut 3 = fine

#### Colour code for the file cut

The individual cuts are additionally identified by colour-coded labels

Cut 1 = green    Cut 2 = yellow    Cut 3 = red

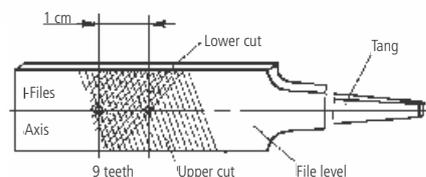

#### PFERDVIDEO

You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

### Overview of file designations according to DIN

Designation	Shape symbol	Machinist's files	Sharpening files	Repps	Cabinet files	Milled tooth files	Key files
DIN		7261	7262	7263	7264	7283	
Hand		A	E, F	A, B		A, E	A
Flat		B					B
Three square		C	A, B, C, D				C
Square		D				B	D
Half round		E		C, D	F	D, F	E
Round		F		E		C	F
Knife files		G	G				
Lathe files		H					

#### Determination of teeth number

#### Example:

At a length of 250 mm, a cut 1 file has 9 teeth/cm. A 100 mm long file of the same cut has 17 teeth/cm of file length. The higher number of teeth found on shorter files is intended to provide the same ease of use (in terms of force input, guidability and stock removal) on surfaces and edges as a longer tool.

#### Dimensions

The cross-sectional dimensions indicated in the tables are measured across the cut and may vary depending on cut type. PFERD files are manufactured according to DIN and ISO standards.

## General information

PFERD tools are manufactured in compliance with the highest quality standards. The broad product range offers the best tool solution for every application. Outstanding quality, long tool life and excellent stock removal performance allow economical work with diverse materials, delivering excellent results. PFERD quality is certified according to ISO 9001.

If you have any questions about the optimization of your burr applications, our sales representatives and technical advisors will be happy to help or visit you. PFERD works alongside you to provide application engineering solutions for working with diverse materials.  
 Visit us: [www.pferd.com.au](http://www.pferd.com.au)  
 Or call **1300 0 PFERD**

If you cannot find the solution for your particular application in our product range, we produce burrs of premium PFERD quality on request, tailor-made to meet the requirements of your job.

Please contact your PFERD sales representative.

**PFERDVIDEO**  
 You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

### Cuts for universal applications

#### Cut 3 (MY according to DIN 8033)

- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal
- Good surface

#### Cut 3 PLUS (MX according to DIN 8033)

- Similar to cut 3, but with cross cut
- Machining of cast iron, steel < 60 HRC, stainless steel (INOX), nickel-based alloys and titanium alloys
- High stock removal

#### Cut 5 (F according to DIN 8033)

- Fine machining of cast iron, steel < 60 HRC, stainless steel (INOX) and high-temperature-resistant materials such as nickel-based and cobalt-based alloys
- Good surface

### Cuts for high-performance applications

#### Cut STEEL

- Extremely high stock removal performance on steel and cast steel
- Smooth milling
- Reduced vibration and less noise

#### Cut INOX

- Extremely high stock removal performance on all austenitic, rust- and acid-resistant steels, stainless steel (INOX)
- Substantially reduced vibration and less noise

#### Cut ALU

- High stock removal performance on aluminium and aluminium alloys, light metals, non-ferrous metals and plastics
- Smooth milling

#### Cut NON-FERROUS

- High stock removal performance on non-ferrous metals, brass, copper, plastics and fibre-reinforced plastics
- Universally usable

#### Cut CAST

- Extremely high stock removal performance on cast iron
- Smooth milling
- Reduced vibration and less noise

#### Cut EDGE

- Creates exact edge shapes – with either 30°- or 45°-chamfering or a defined radius of 3.0 mm
- Safe and comfortable to guide

#### Cut PLAST

- Trimming and contour milling of workpieces from less hard glass- and carbon-fibre-reinforced duroplastics (GRP and CRP 40 % fibre content) and fibre-reinforced thermoplastics
- Minimized delamination and fraying through straight cut
- Suitable for use on machines and on robots
- Burrs with end cut or with center drill tips allow combined drilling and cutting tasks
- Reduced vibration and less noise

#### Cut FVK

- Trimming and contour milling of workpieces from hard glass- and carbon-fibre-reinforced duroplastics (GRP and CRP > 40 %)
- Burrs with end cut or with center drill tips allow combined drilling and cutting tasks

#### Cut FVKS

- Similar to cut FVK
- Suitable for use on machines and on robots with high feed rates
- Smooth milling
- Burrs with end cut or with center drill tips allow combined drilling and cutting tasks

#### Cut TOUGH

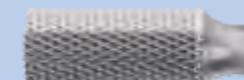

- High stock removal performance on cast iron, steel < 55 HRC
- High stock removal
- Extreme impact resistance
- Also suitable for use with high surface contact angles > 1/3 and under impact loads

#### Cut TOUGH-S

- High stock removal performance on cast iron, steel < 55 HRC
- High stock removal. Similar to cut TOUGH, but with smoother milling and shorter chips
- Extreme impact resistance
- Also suitable for use with high surface contact angles > 1/3 and under impact loads

#### Cut MICRO

- Good stock removal on almost all materials < 68 HRC
- High surface quality
- Reduced vibration and less noise

#### Cut TITANIUM

- Specially developed for machining hard titanium materials (tensile strength > 500N/mm<sup>2</sup>)
- Extremely high stock removal
- Low vibration and noise

# Tungsten Carbide Burrs

## Application examples and recommendations

### PFERD tungsten carbide burrs

PFERD tungsten carbide burrs are designed for machining materials of virtually any strength. They are manufactured in compliance with the highest quality standards.

#### Advantages:

- Highest stock removal performance through optimum matching of tungsten carbide, geometry, cut and coating, if necessary
- Improved comfort with reduced operator fatigue due to innovative cuts for high-performance applications
- Very long tool life and high stock removal rates due to application-oriented tool design
- Reduced wear of the drive system due to impact-free work without chatter marks, thanks to the high concentricity

#### Application examples:

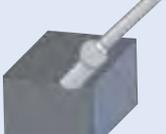

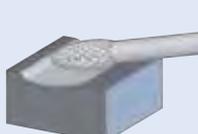

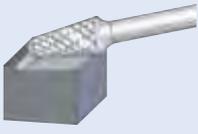

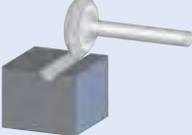

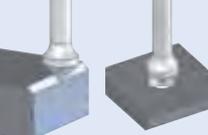

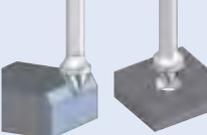

- Deburring
- Contouring
- Edge chamfering/rounding
- Milling out in preparation for build-up welding
- Preparation of weld seams/weld dressing
- Cleaning cast material
- Modification of workpiece geometry

### Recommendations for use:

Optimum power output and rotational speed of the drive system (air-powered or electric grinders, flexible shaft system) are necessary conditions for a cost-effective use of tungsten carbide burrs.

- Use the highest rotational speed possible within the recommended rotational speed and cutting speed range.
- In exceptional cases, it is possible to work at less than 3,000 RPM. This is preferable for stationary use or when countersinking with 360° use of the burr surface.
- For low stock removal (deburring, chamfering, surface finishing), the rotational speed can be substantially increased up to 100 % (exception: tungsten carbide burrs with long shanks).
- For materials which do not conduct heat well, such as stainless steel (INOX), titanium alloys, etc., in particular, follow the rotational speed recommendations in order not to damage the tool. Avoid making the shank and tool turn blue.
- Use only rigid clamping systems and drives, as impacts on and chattering of the tools lead to premature wear.
- Do not choose a burr clamping depth that is too small. In general, the minimum clamping depth is 2/3 of the shank length.
- For cost-effective use of burrs with a shank diameter > 6 mm, a tool drive output of 300–500 watts is required when used at higher rotational speed and cutting speed. When using burrs with coarse cuts (e.g. ALU cut), even higher tool drive outputs above 500 watts are advantageous.
- The burr surface in contact with the workpiece must not exceed 30 % of the total burr surface. Failure to comply with this recommendation will result in rough milling behaviour and possibly in broken teeth. If this cannot be avoided, we recommend using the TOUGH and TOUGH-S cuts.
- In general, burrs are used counter-rotationally or with a swinging motion. Pass the tool rapidly over the workpiece in the direction of rotation to achieve fine finishes.

### Burr shapes and their applications

<b>Cylindrical shape</b>  <b>ZYA</b>	<b>with end cut</b>  <b>ZYAS</b>	<b>Ball shape</b>  <b>KUD</b>	<b>Cylindrical shape with radius end</b>  <b>WRC</b>	<b>Flame shape</b>  <b>B</b>	<b>Pointed tree shape</b>  <b>SPG</b>
<b>Conical shape with radius end</b>  <b>KEL</b>	<b>Conical pointed shape</b>  <b>SKM</b>	<b>Tree shape with radius end</b>  <b>RBF</b>	<b>Oval shape</b>  <b>TRE</b>	<b>Inverted cone</b>  <b>WKN</b>	<b>with end cut</b>  <b>WKNS</b>
<b>Rim shaped</b>  <b>N</b>	<b>Conical counterbore shape 90°</b>  <b>KSK</b>	<b>EDGE 45°</b>  <b>KSK</b>	<b>Conical counterbore shape 60°</b>  <b>KSJ</b>	<b>EDGE 30°</b>  <b>KSJ</b>	<b>Radius burrs</b>  <b>R</b>
<b>Concave radius burrs</b>  <b>V</b>	<b>EDGE R2.5/ R3.0</b>  <b>V</b>	<b>Safety notes:</b>			
		 = Wear eye protection!	 = Observe the recommended rotational speed, especially when using burrs with long shanks!		
		 = Wear hearing protection!

## General information

### PFERD quality

PFERD mounted points are developed, manufactured and tested according to the highest quality standards.

Research and development, our own machine and plant construction, as well as the continuous monitoring of the production processes guarantee the high quality of PFERD products.

PFERD quality management is certified according to ISO 9001.

**PFERDVIDEO**  
You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

### Customer consultation

If you have any questions regarding the optimization of your grinding work or solutions to specific application problems, our sales representatives and technical advisors will be happy to help.

Visit us: [www.pferd.com.au](http://www.pferd.com.au)  
Or call **1300 0 PFERD**

### Products made to order

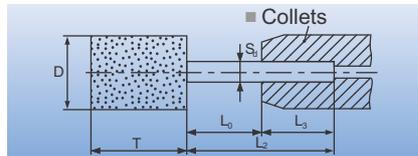

If you cannot find the solution for your particular application in our comprehensive product catalogue, we can produce mounted points in premium PFERD quality on request, tailor-made to meet the requirements of your job.

We take account of your requirements and wishes, drawings, information on bonds and hardness, grit sizes, grit types, shapes, dimensions, shanks and packaging.

Please contact our sales representatives!  
We will be happy to advise you.

### Explanation of the code system according to EN 12413

- D = Mounted point outer diameter
- T = Mounted point width
- $S_d$  = Shank diameter
- $L_0$  = Unsupported shank length
- $L_2$  = Shank length
- $L_3$  = Clamping length of shank

### Safety notes

All mounted points supplied by PFERD are approved for a maximum operating speed of 50 m/s. Maximum permitted rotational speeds for the various shank lengths and shank diameters are defined in DIN 69170 based on EN 12413. These must be strictly adhered to in order to avoid buckling of the shank during use. Regardless of the shank length, the clamping length ( $L_3$ ) in the machine collet must be at least 10 mm.

The maximum permitted rotational speed calculated in accordance with EN 12413 is determined by the following factors:

- Shape and dimensions of the mounted point
- Diameter of the steel shank  $S_d$
- Unsupported shank length  $L_0$

Each packaging of PFERD mounted points comes with rotational speed recommendations for a given unsupported shank length ( $L_0$ ) of that product. In addition, the concentric accuracy and correct clamping of the tool drive must be ensured.

Tables with the maximum permitted rotational speed for the entire PFERD mounted point product range are available on request.

= Wear eye protection!

= Wear hearing protection!

= Read the safety instructions!

### Cutting speeds

The diagram on the right allows you to determine the rotational speed from a given cutting speed. Recommended cutting speeds are stated in the introductory descriptions of the various hardness grades on the following pages.

The recommended rotational speed can be taken from the product tables.

In the diagram, cutting speeds are represented by blue diagonal lines. Each vertical line represents a tool diameter and intersects the diagonal lines. From its point of intersection with the diagonal line for a given peripheral speed, proceed horizontally to the left margin where you will find the corresponding rotational speed of the mounted point and tool drive.

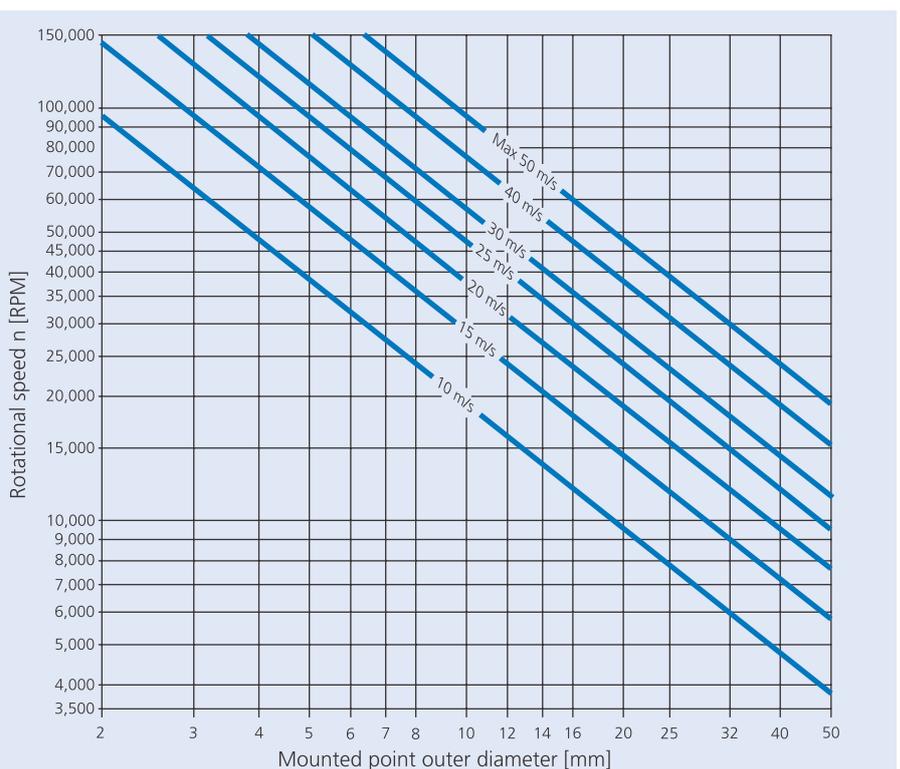

#### Example:

Mounted point outer diameter 20 mm

Hardness: M

Cutting speed: 30–50 m/s

**Rotational speed: 28,600–47,700 RPM**

# Mounted Points

## The fast way to the best tool

PFERD offers a very extensive line of vitrified and resinoid-bonded mounted points.

Designed to meet individual application needs, these products come in a broad range of grain types, grit sizes, hardness levels and shapes. The mounted points are manufactured on advanced production lines to high standards of dimensional accuracy and stability, consistent quality, and close tolerances.

To select the correct mounted point, the material, main fields of application and specific operating requirements have to be taken into consideration. This overview shows which different types (abrasives, bonds and hardness grades) are recommended for the various materials and the tasks at hand.

### How do I find the best mounted point?

#### 1 Material

Normally it is necessary to determine the material to be machined. The various material groups are colour-coded and shown on the left-hand side of the chart below.

The application must then be selected according to the type of work on the material.

We make the following differentiation:

- General use,
- surface grinding and
- edge grinding applications.

1 Material groups			Bond	Resinoid bond	
			3 Hardness grade	Hardness L	Hardness N
			Abrasive grit type	ADW	AN
					
			Recommended cutting speed	35-50 m/s	35-50 m/s
			2 Application		
Steel, cast steel	Non-hardened, non-heat-treated steels up to 1200 N/mm <sup>2</sup> (< 38 HRC)	Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels	General use on edge and surface		
			Surface grinding with high stock removal		
			Edge grinding with high form stability		
	Hardened heat-treated steels exceeding 1200 N/mm <sup>2</sup> (> 38 HRC)	Tool steels, tempering steels, alloyed steels	General use on edge and surface		
			Surface grinding with high stock removal		
			Edge grinding with high form stability		
	Cast steels	Non-alloyed cast steels, low-alloyed cast steels	Surface grinding with high stock removal		
			Edge grinding with high form stability		
Stainless steel (INOX)	Rust and acid-resistant steels	Austenitic and ferritic stainless steels	Surface grinding with high stock removal	●	
			Edge grinding with high form stability		●
Non-ferrous metals	Soft non-ferrous metals	Aluminium alloys, brass, copper, zinc	General use on edge and surface		
	Hard non-ferrous metals	Bronze, titanium, titanium alloys, hard aluminium alloys		●	
	High-temperature resistant materials	Nickel-based alloys and cobalt-based alloys (engine and turbine construction)			
Cast iron	Grey cast iron, white cast iron	Cast iron with fake graphite EN-GJL, with nodular graphite cast iron EN-GJS, white annealed cast iron EN-GJMW, black cast iron EN-GJMB	Surface grinding with high stock removal		
			Edge grinding and grinding of burning-in with high form stability		
Plastics and other materials		FRP, thermoplastics, rubber, wood	General use on edge and surface		

● = highly suitable

= suitable

\* = additional types for foundries

This differentiation is necessary in order to find the optimum mounted point and correct bond type.

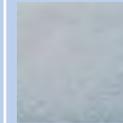

The mounted point bond, hardness and grain mix have a decisive impact on the abrasive performance, tool life and aggressiveness of the tools:

- For **general use**, the emphasis is on the balance between abrasive performance and tool life.
- In **surface grinding**, the mounted points are subject to lower loads. This is why the mounted point bond is comparatively soft and designed to give high stock removal.
- In **edge grinding**, the mounted points must be dimensionally stable. This is why the mounted point bond is comparatively hard and designed for a long tool life.

### ③ Mounted point hardness

After determining the application (see column ②) the hardness is selected in the horizontal row. The hardness grades of the bonds are arranged from soft to hard. The "highly suitable" hardness is indicated by a black dot (●).

Further "suitable" hardness grades are indicated by an open square (□). Applications that have been optimized specifically for foundries are indicated by a blue asterisk (\*).

Vitrified bond									
Hardness D	Hardness F-ALU	Hardness H	Hardness I	Hardness J	Hardness K	Hardness M	Hardness O	Hardness R	Hardness T
AH	CN	AWN	AW	AWCO	ARN	ADW	AR	CU	AW
									
5-20 m/s	20-40 m/s	30-50 m/s	25-40 m/s	30-50 m/s	15-20 m/s

# Mounted Points

## General information

### Codes

According to EN 12413 Cylindrical mounted point  
ZY 2025 6 AR 30 O 5 V

① ② ③ ④ ⑤ ⑥ ⑦ ⑧

#### ① Tool shapes

ZY = Cylindrical

WR = Cylindrical with radius end

KE = Tapered

SP = Tree

KU = Ball

TO = Cup

US - shapes according to ANSI B74.2  
Series W (Cylindrical in inch-dimensions)  
Series A and B (other shapes)

#### ② Dimensions

According to ISO 525  
Dia. D x width T mm  
e.g. D x T = ISO designation  
3mm x 6mm = 0306  
20mm x 25mm = 2025  
50mm x 13mm = 5013

US dimensions - Series W  
Cylindrical mounted points  
and series  
A + B shaped mounted  
points are specified by  
a number (e.g. W143)

#### ③ Shanks

Please state the shank diameter in your order number. Shank lengths are factory-defined according to shank diameter as follows:

3mm dia. x 30mm shank length  
6mm dia. x 40mm shank length  
8mm dia. x 40mm shank length  
1/8" dia. x 1 1/4" shank length  
1/4" dia. x 1 1/2" shank length

#### ④ Abrasives

As a rule, two types of abrasives with internationally defined designations according to ISO 525 are used.

A = aluminium oxide (Al<sub>2</sub>O<sub>3</sub>)

C = silicon carbide (SiC)

In order to specify the exact type of abrasive or grain mixture, further classification - beyond this ISO 525 is necessary. The following classification is used:

AD = aluminium oxide, dark red

AW = aluminium oxide, white

AR = aluminium oxide, pink

AN = aluminium oxide, regular

AH = bubble grain

CN = silicon carbide, green

CU = silicon carbide, grey

CO = ceramic oxide grain, blue

ADW = alum. oxide mixture AD + AW

AWN = alum. oxide mixture AW + AN

ARN = alum. oxide mixture AR + AN

ADR = alum. oxide mixture AD + AR

AWCO = alum. mixture AW + CO

### Hardness grades

Mounted points in hardness D are manufactured from a special vitrified bond and bubble grain aluminium oxide (HKK). The low bond volume in combination with the easy-to-break-down bubble grain produces the softest mounted points in the PFERD product range. The hardness D is particularly suitable for work on soft materials such as plastic, rubber, and wood, and is characterized by its high abrasiveness.

Mounted points in hardness F-ALU are manufactured from green silicon carbide in a vitrified bond. The extremely open micro-structure and a special impregnation allow extremely high stock removal rates when working on lubricating materials. The hardness F-ALU is produced especially for general use on aluminium and non-ferrous metals and is characterized by its high abrasive qualities and stock removal.

Mounted points in hardness J are manufactured from a vitrified bond and a grain mix of white aluminium and blue ceramic. The soft bond in combination with the easy-to-break-down, sharp-edged white aluminium oxide and the self-sharpening effect of the microcrystalline ceramic oxide grain allows extremely high stock removal rates with excellent tool life. The hardness J is perfectly suited for surface work on titanium materials, nickel- and cobalt-based alloys, hardened steel components and build-up weld deposits.

Mounted points in hardness L are manufactured from a grain mix of white and dark red aluminium oxide and a high-quality resinoid bond. This relatively soft bond contains grinding additives and, in combination with the grain mix, leads to exceptionally high stock removal rates and a long tool life. The hardness L is particularly suited for surface work on stainless steel (INOX) and for general use on non-ferrous metals and bronze.

Mounted points in hardness M, are manufactured from a grain mix of tough, dark red and easy-to-break-down, white aluminium oxide in a vitrified bond. This grain combination leads to a good balance between stock removal rate and tool life. The hardness M is the most universally used bond for work on steel and cast steel.

Mounted points in hardness N are manufactured from regular aluminium oxide and a high-quality resinoid bond. This relatively hard bond contains grinding additives, which in combination with tough regular aluminium oxide and hard bond allow high stock removal rates and excellent tool life. The hardness N is particularly suited for edge grinding on stainless steel (INOX). It is characterized by cool grinding and high dimensional stability.

Mounted points in hardness O consist of pink aluminium oxide in a vitrified bond. These tools are characterized by a very long tool life and good stock removal rate due to the combination of wear-resistant grain and a hard bond. The hardness O is particularly suited for use on edges and for deburring work on steel components.

Mounted points in hardness R, are manufactured from grey silicon carbide in a vitrified bond. The combination of very hard abrasive grain and high bond content means that extremely long tool life is achieved when grinding. The hardness R is particularly suitable for use on edges and for grinding out metal contamination on grey and nodular cast iron at high cutting speeds.

#### ⑤ Grit sizes

Grit sizes are specified according to ISO 525 and ISO 8486.

The grit sizes of PFERD mounted points are correlated to the shape and diameter of the point.

#### ⑥ Hardness grades

Abrasive hardness grades are classified according to ISO 525, using letters in alphabetical order to specify the hardness on an incremental scale (from soft to hard). See Below.

#### ⑦ Structure number

The density of the structure, indicated in accordance with ISO 525 is given in the order number. The scale ranges from 1 = dense structure to 14 = open (porous) structure

#### ⑧ Bond

Bond types are designated by an internationally standardized letter code according to ISO 525.

V = vitrified bond

B = resinoid bond

PFERD provides a wide range of tools using coated abrasives for machining different workpiece geometries and materials:

- COMBIDISC® abrasive discs
- Abrasive spiral bands and abrasive belts
- Mounted and unmounted flap wheels
- Sheets and shop rolls
- POLIROLL® rolls and
- POLICO® abrasive cones
- Velcro-backed abrasive discs/Self-adhesive discs

Other PFERD tools made of coated abrasives can be found in Catalogue 206 and Coated.

Coated abrasives can be used for wet or dry grinding.

## Structure of coated abrasives

### 1 Backing material

The bond and the abrasive grain are fixed to the backing material. The selection of backing materials available differs in terms of properties such as tensile strength, flexibility and wear. By selecting the appropriate backing, the grinding tool is adapted to the demands of the intended application. The PFERD range is divided into three groups:

#### Paper:

The main applications for coated abrasives with paper backing are in the wood-processing industry and small trade (carpenters, painters, lacquerers etc.) These coated abrasives are not widely used in industrial metal processing. Papers with a mass per unit area of 70–100 g/m<sup>2</sup> are generally used to make abrasives for manual grinding. The heavier papers are used to manufacture abrasives for narrow and wide belts used in machine applications.

#### Cloth:

Coated abrasives with cloth backing are mainly used in the metal-processing industry.

#### Vulcanized fibre:

Vulcanized fibre in different strengths, adapted for each machining application, is mainly used in the production of fibre discs. Vulcanized fibre provides an extremely strong, robust backing and is extremely wear-resistant.

### Bond

Different resin bonds are used in the manufacture of coated abrasives for anchoring the abrasive grain to the backing. First of all, the backing material is coated with the basic bond (2). Then the abrasive grain is strewn evenly across the surface and aligned in special procedures to achieve higher aggressiveness. The abrasive grain is then anchored firmly with the top bond (3), which also protects the abrasive grain against the forces and loads resulting from the grinding process.

### 4 Abrasive grain

Choosing the correct abrasive grain strongly influences the surface quality and cost-effectiveness. The standard materials used to make abrasive grain are:

#### Aluminium oxide A:

Many types of aluminium oxide are used as abrasives. They can be used in their fused or sintered forms. Their hardness and toughness (grades) can be influenced using special manufacturing methods or additives. Normal aluminium oxides with a 'sharp-edged' grit shape are mainly used in the production of coated abrasives.

#### Ceramic oxide grain CO:

Sintered aluminium oxides are divided into sintered bauxite aluminium oxides and sol-gel aluminium oxides. Sol-gel aluminium oxides are mainly used as ceramic grit for coated abrasives. This highly modern abrasive is used in many applications due to its high level of toughness and good self-sharpening property.

#### Zirconia alumina Z:

Zirconia alumina is a fused mixture of aluminium oxide and zirconium oxide. While zirconia alumina is not as hard as aluminium oxides, it is tougher. The high proportion of zirconium oxide gives the zirconia alumina grain an exceptionally effective self-sharpening effect, contributing to excellent stock removal with cool grinding and a long tool life.

#### Silicon carbide SiC:

Silicon carbide is a synthetically produced abrasive grain, which is very sharp-edged, not particularly tough, but very hard. It is particularly suitable for work on titanium, aluminium, bronze, stone and plastic.

#### Diamond grain:

Diamond abrasive grain is the hardest abrasive. It consists of pure carbon in crystalline arrangement. For grinding tools, the diamonds used are generally produced synthetically at very high temperatures and under high pressure. The properties of the diamond abrasive grain can be adapted to use in the grinding tool through various synthesis conditions.

### Grit sizes

The different grit sizes for coated abrasives are defined in ISO 6344 and have been adopted in the FEPA standards:

- Coarse:  
P 80 – 60 – 50 – 40 – 36 – 24 – 20 – 16 – 12
- Medium:  
P 280 – 240 – 220 – 180 – 150 – 120 – 100
- Fine:  
P 600 – 500 – 400 – 360 – 320
- Superfine:  
P 1500 – 1200 – 1000 – 800

### 5 Active grinding layer

The use of an active grinding layer significantly increases stock removal and reduces the workpiece temperature. This is a particular advantage in the case of materials which do not conduct heat well, such as stainless steel (INOX).

PFERD tools with an active grinding layer are identified with the addition of 'COOL' in the description.

# Fine grinding and polishing tools

## Surface roughness – influencing factors and reference values

### Factors influencing the surface roughness:

#### Abrasives:

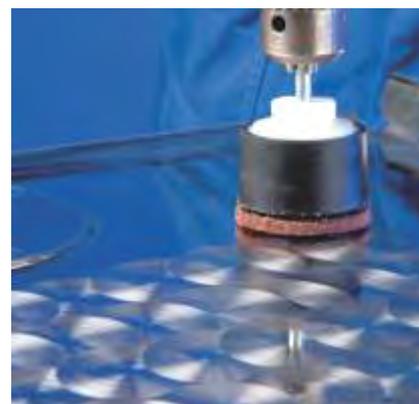

- The coarser the grit, the rougher the surface achieved
- Aluminium oxide, ceramic oxide grain and zirconia alumina achieve similar degrees of surface roughness
- Workpieces that are machined with silicon carbide display a slightly finer surface finish

#### Machining parameters:

- The relationship between cutting speed and feed has the following effects:
  - By increasing the cutting speed, the surface quality is slightly improved
  - By reducing the feed speed, the surface quality becomes slightly finer
- The contact pressure has only a very slight effect on the surface roughness

#### Material to be machined:

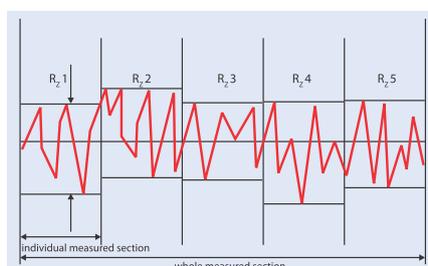

- The softer the material to be machined, the coarser the surface produced when using the same grit size
- By adding grease or lubricant, a slightly finer surface finish is achieved

### A distinction is made between the following degrees of surface roughness:

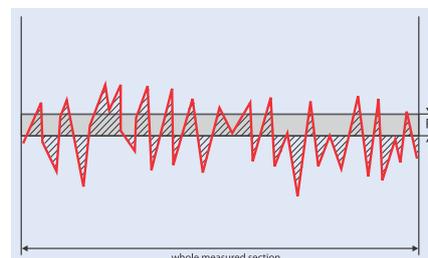

The **individual surface roughness  $R_{z,i}$**  is the sum of the height of the largest profile peak and the depth of the largest profile trough within an individual measured section.

The **surface roughness  $R_z$**  is the average of the individual surface roughness figures ( $R_{z,i}$ ) for consecutive individual measured sections.

The **surface roughness  $R_{max}$**  is the highest individual surface roughness within the whole measured section.

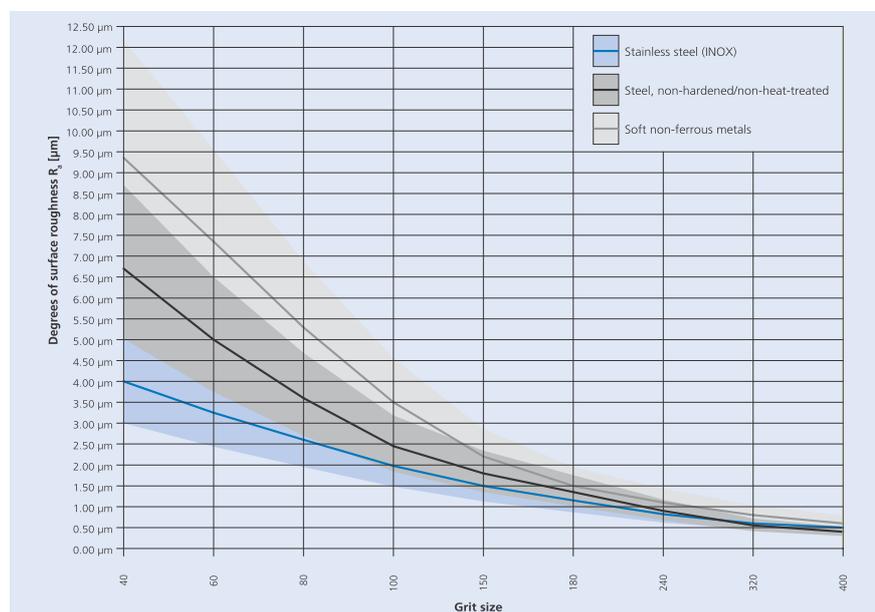

The **mean surface roughness  $R_a$**  is the arithmetic mean of the figures for all the profile values of the roughness profile.

### Guide values for degrees of surface roughness with different machining applications:

Application	Surface roughness
Coarse grinding: Grit sizes 24 to 150	$R_a = 0.70$ to $12 \mu\text{m}$
Fine grinding: Grit sizes 180 to 400	$R_a = 0.20$ to $0.70 \mu\text{m}$
Polishing: Step 1: Step 2: Step 3:	$R_a = 0.10$ to $0.20 \mu\text{m}$ $R_a = 0.04$ to $0.10 \mu\text{m}$ $R_a < 0.01 \mu\text{m}$
Texturing: Surfaces 2G 80 to 2G 320	$R_a = 0.20$ to $0.70 \mu\text{m}$
Satin finishing/ matt finishing: With non-woven material	$R_a = 0.10$ to $0.70 \mu\text{m}$

### Surface roughness of various materials following machining with tools using coated abrasives

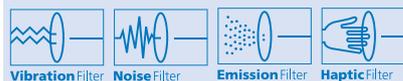

### PFERDERGONOMICS®

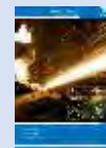

The PFERDERGONOMICS® program aims at the long-term reduction of dust, noise and vibration levels produced by tools, and on perceptibly increasing tool haptics. The focus is on people.

Recognize straight away the areas where our tools offer you advantages.

Tools with PFERDERGONOMICS® properties are marked with corresponding pictograms.

For more information and appropriate PFERD tools, see the brochure 'PFERDERGONOMICS® – The focus is on people'.

### PFERDVIDEO

You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

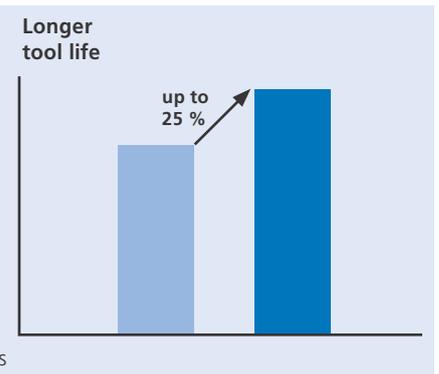

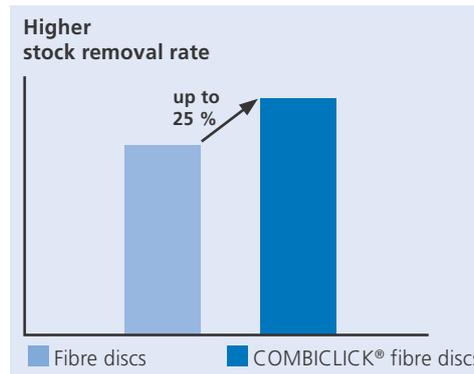

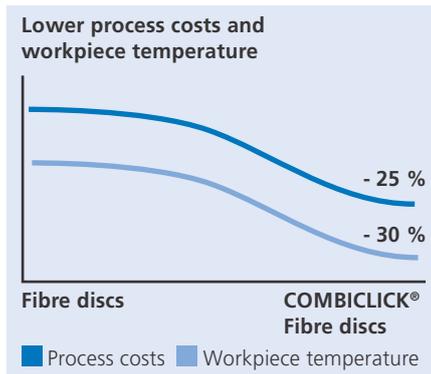

The patented cooling and quick-mounting system from PFERD is suitable for use with fibre, non-woven and felt discs.

The COMBICLICK® system consists of a specially developed backing pad and a rugged mounting system at the back of the tool. The backing pad allows COMBICLICK® tools to be used on commercially available angle grinders.

The special geometry of the cooling slots ensures a high throughput of air, thus significantly reducing the thermal load on the abrasive material and workpiece.

The quick-mounting system, rugged fixture, secure attachment of the tool and optimized cooling system help to provide

- up to 30 % lower workpiece temperature,
- up to 25 % increased stock removal,
- up to 30 % longer tool life and improved utilization of the abrasive.

## Advantages:

### System

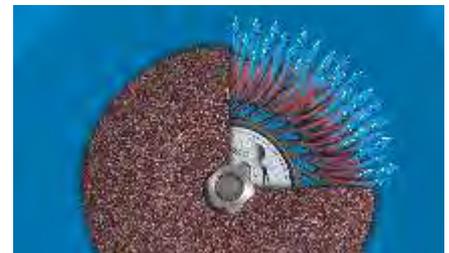

Very easy and comfortable to use.

### Mounting principle

Extremely fast and easy tool change reduces process costs.

### Cooling effect

Very good cooling of tool and workpiece.

### Flexible grinding

Soft and particularly flexible grinding performance in face-down grinding.

### COMBICLICK® allows very flat use!

With COMBICLICK®, scratches caused by prominent clamping parts are prevented and very high utilization of the available abrasive is attained.

**PFERDERGONOMICS® recommends** COMBICLICK® as an innovative tool solution to sustainably reduce vibration, noise and dust levels produced by tools, and to improve working comfort.

## In use in many industries

The use of efficient tools for surface finishing and cutting of materials is an important factor for economic value in many processes and industries.

For certain materials and applications, tools with superhard abrasive like diamond or CBN (cubic boron nitride) abrasives provide a cost-effective alternative to conventional tools.

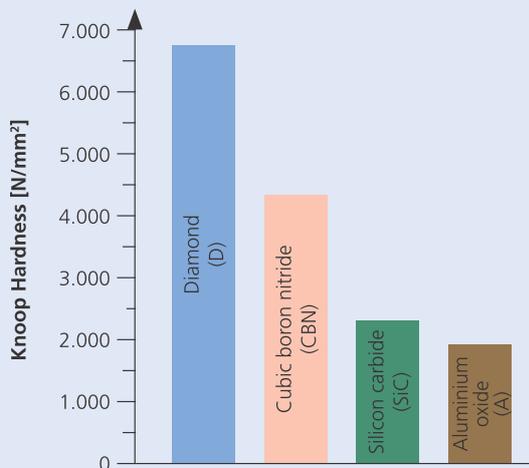

With their high hardness, they have a particularly long tool life and are an established problem-solver in many industries:

- Automotive industry and suppliers
- Energy industry
- Foundries (grey and nodular cast iron)
- Ceramic industry
- Plastics processing (GRP/CRP)
- Machine and plant construction
- Medical equipment
- Tool and mould construction
- Tool industry

## Materials

Diamond and CBN abrasives are used when materials cannot be machined with conventional abrasives such as aluminium oxide or silicon carbide. They also provide a more economical solution for some applications.

Due to high chemical wear, rotating diamond tools are not suitable for work on steel. CBN tools are used for these applications. The two abrasives complement each other ideally. In the adjacent overview, you will find various materials associated with the abrasives.

## Superhard abrasives

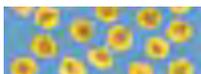

Diamond and CBN form the group of superhard abrasives.

Diamond is the hardest naturally occurring solid. It consists of pure carbon in crystalline structure. For grinding tools, the diamonds used are generally synthetic, produced at very high temperatures under high pressure. The CBN (cubic boron nitride) is the second-hardest solid known. It consists of boron and nitrogen in a crystalline structure.

For work on certain materials, diamond and CBN tools are an economic alternative to tools with conventional abrasives such as aluminium oxide and silicon carbide. Diamond and CBN grain is much harder and its cutting edges are very resistant to blunting. Diamond and CBN tools therefore enjoy a very long tool life.

## Colour coding system

Using the colour coding system, you recognize straightaway the abrasive of the tool.

### Diamond

- Duroplastics, in particular with glass or carbon fibre reinforcement (GRP, CRP)
- Ferrite (magnetic material)
- Glass
- Graphite and synthetic carbon
- Grey and nodular cast iron
- Tungsten carbide
- Nickel- or titanium-based superalloys
- Technical ceramics
- Wear-resistant coatings (powder metal alloys and hardfacing alloys)

### CBN

- Case-hardened steels
- Roller-bearing and ball-bearing steels
- Tool steels
- Other hardened steel materials with a hardness up to approx. 54 HRC

**Diamond = blue**

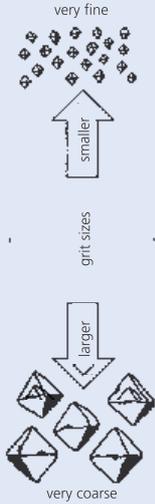

**CBN = red**

### Grit sizes

The grit size data for diamond and CBN tools relate to the average grit diameter in  $\mu\text{m}$ . Thus, the higher the number specified in the grit designation, the coarser the grit size. A coarse grit size increases stock removal and surface roughness of the workpiece.

Selecting the optimum grit size depends on the intended application, the material to be machined, the tool drive employed and a wide range of other factors. As a general rule: The harder the material to be worked and the finer the desired surface roughness, the finer the selected grit size should be.

Grit sizes	Grit size designation [ $\mu\text{m}$ ] ISO 6106 (FEPA standard)		Equivalent US mesh number/inch US Mesh Size
	Diamond	CBN	
<b>Micro-grit</b> 	D 25	-	-
	D 46	B 46	325/400
	D 54	B 54	270/325
	D 64	B 64	230/270
	D 76	B 76	200/230
	D 91	B 91	170/200
	D 107	B 107	140/170
	D 126	B 126	120/140
	D 151	B 151	100/120
	D 181	B 181	80/100
	D 213	B 213	70/ 80
	D 251	-	60/ 70
	-	B 252	60/ 80
	D 301	B 301	50/ 60
	D 357	B 357	45/ 50
	D 427	B 427	40/ 50
	D 502	-	35/ 45
	D 602	-	30/ 40
	D 711	-	25/ 30
	D 852	-	20/ 30

The recommended cutting speed ranges depend on the application and must not exceed the maximum permissible peripheral speed. Because of the wide range of tasks and application fields of electroplated diamond and CBN tools, as well as the large influence of the employed tool drive, it is not possible to specify a generally valid cutting speed. The recommended cutting speed ranges serve as reference values.

### Generally, the following applies:

- In dry grinding, do not use diamond tools at too high a cutting speed in order to avoid thermal damage to the abrasive.
- If possible, do not use CBN tools under the cutting speeds specified below. The optimum cutting speed has a direct effect on the economic value of the tools in use.
- All parameters must always be coordinated with each other within the grinding process. If the cutting speed is changed, among others the feed, infeed and coolant supply must be adjusted accordingly.
- Electroplated diamond and CBN tools can be used in dedicated stationary applications up to a peripheral speed of 125 m/s.

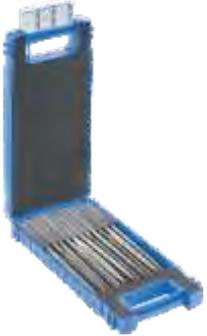

Cutting speed [m/s] ►			5	10	15	20	25	30	35	40	45	...	80

### PFERD quality

PFERD grinding and cut-off wheels are developed, manufactured and tested to the highest quality standards. The standard-compliant dimensional stability indicates the comprehensive PFERD quality.

In addition to the high quality standards, health and safety as well as ergonomics play a prominent role.

PFERD quality management is certified according to ISO 9001.

### PFERD packaging

PFERD supplies grinding and cut-off wheels in sturdy industrial packaging that protects the tools from damage. For packaging units, please refer to the product tables. Important information, such as article number, description, EAN code and technical information can be found on the packaging labels.

### PFERD support and training

PFERD offers you individual targeted support to solve your application problems. PFERD's experienced sales representatives and technical advisors will be pleased to assist you. Please contact us.

In the **PFERD Training**, we provide highly specialized and practical knowledge from the world of grinding and cutting. Through the successively built-up blocks of seminars, you will become a PFERD tool specialist.

### Products made to order

If you cannot find the solution for your particular application in our product range, we can produce grinding and cut-off wheels in premium PFERD quality on request, tailor-made to meet the requirements of your job.

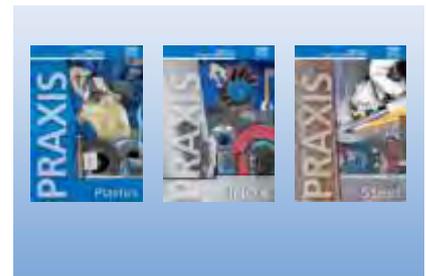

Taking into account the material to be worked and the given application, we offer individual and effective advice with the aim of finding the best and most economical solution for you.

### PFERD TOOL-CENTER

On the PFERD TOOL-CENTER of your local retailer, you will find all the important information required for selecting the most appropriate tool. The PFERD information and symbol cards provide important tips about tools and applications.

If you have any questions, your local retailer or PFERD sales representative will be happy to help you.

### PFERD PRAXIS

PFERD PRAXIS brochures contain much valuable information on material properties, as well as tips and tricks on the use of PFERD tools.

### PFERDVIDEO

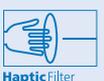

You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

### PFERDERGONOMICS®

The **PFERDERGONOMICS®** programme aims at the long-term reduction of dust, noise and vibration levels produced by tools, and on perceptibly increasing tool haptics. The focus is on people.

Recognize straight away the areas where our tools offer you advantages.

Tools with **PFERDERGONOMICS®** properties are marked with corresponding pictograms.

For more information and appropriate PFERD tools, see the brochure '**PFERDERGONOMICS®** – The focus is on people'.

PFERD grinding and cut-off wheels help reduce hazardous vibration and noise of the working process. The requirements of ISO 6103 are met.

For more information, see the brochure 'Health and safety at the workplace – noise and vibration limits'.

## Grinding & Polifan® Wheels

### Product lines

For the wide variety of abrasive grinding applications in industry and crafts PFERD now offers three types of reinforced grinding wheels with their proven colour coding system:

#### Universal line PS-FORTE

General use in industry and trades

#### Performance line SG-ELASTIC

Widest range of tools for professional use in industry and trades

#### Special line SG-PLUS

For special industrial applications

The PFERD range of reinforced grinding wheels meets state-of-the-art requirements, providing outstanding stock removal, handling convenience, and high cost-efficiency.

Reinforced grinding wheels made by PFERD are manufactured to the most stringent quality standards. Operator health risks are reduced through minimised vibration levels and high dimensional stability.

The development of new, specialised grinding tools such as CC-GRIND® and CC-GRIND-SOLID® have further redefined the task of grinding. Very high stock removal rates combined with reduced noise, dust and vibration enable efficiencies never seen before in metal grinding applications.

POLIFAN® flap discs can offer advantages over reinforced grinding wheels where a superior surface finish must be achieved in addition to high stock removal rates.

The wide range of high-grade abrasive flap types and proven special-purpose versions available from PFERD meet the demands of the most exacting and difficult grinding tasks while reflecting the specific properties of each material.

The high-performance flap disc **POLIFAN®-STRONG** with its exceptional abrasive qualities and tool life and the flap disc **POLIFAN®-CURVE** for fillet weld grinding are examples of these PFERD innovations.

## Cut-Off Wheels

### Product lines

PFERD cut-off wheels provide optimum abrasive results. Choose from three product lines with different performance characteristics to match the specific material, power tool type and machining task.

#### Universal line PS-FORTE

General use in industry and trades

#### Performance line SG-ELASTIC

Widest range of tools for professional use in industry and trades

#### Special line SG-PLUS

For special industrial applications

The highly differentiated product lines can be used for all practical machining tasks. You can always choose the optimal cut-off wheel for the respective application.

### Maximum operating speed

The maximum operating speed [m/s] is indicated by a colour bar on the product labels and product packaging, in accordance with the specifications of EN 12413, EN 13743 and EN 13236. The maximum permissible rotational speed specification applies to the nominal diameter of the unused grinding tools.

Maximum operating speed	Colour bar
50 m/s	blue
63 m/s	yellow
80 m/s	red
100 m/s	green

### Safety standards

Grinding and cut-off wheels made by PFERD conform to the most exacting safety requirements and are marked according to the following key European and international safety standards:

- EN 12413 for grinding tools with bonded abrasives
- EN 13236 for grinding tools with diamond or boron nitrate
- EN 13743 for abrasives on backing material
- ANSI B7.1 / OSHA regulations
- AS 1788.2

### Grinding safety

Abrasive manufacturers, machine producers and users all contribute to grinding safety.

All PFERD tools are built to meet the prescribed safety codes. The user, however, is responsible for proper handling of the tool drive and correct use and application of the grinding tool.

Do you have any questions on grinding safety? PFERD will be glad to provide advice and support, whether through seminars at our PFERD Training or on-site via our sales representative.

### PFERD is a long-standing member of oSa

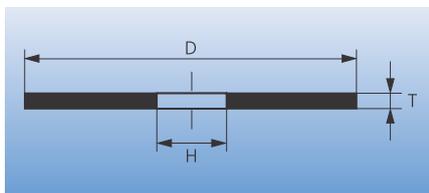

Together with other manufacturers, PFERD has voluntarily undertaken to produce quality tools conforming to the most exacting safety standards.

Member companies of oSa (The Organization for the Safety of Grinding Tools) are committed to continuous product safety and quality monitoring. PFERD tools carry the oSa mark.

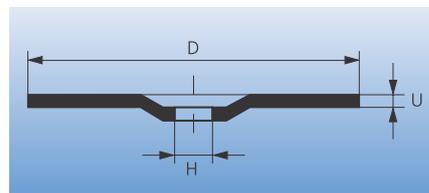

### Dimensions

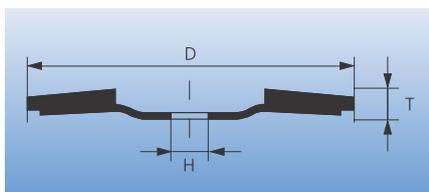

The following abbreviations are used in drawings and tables: D (= Outer diameter), T or U (= Width), H (= Centre hole), W (= Wall thickness) and J (= Smallest diameter).

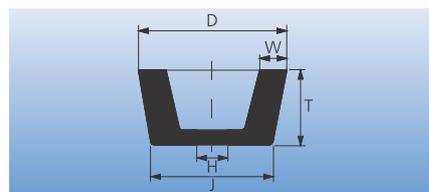

Flat type

Depressed-centre type

Conical type

Cup wheel, tapered type

### Safety notes

= Wear eye protection!

= Wear hearing protection!

= Wear a respirator!

= Not permitted for circumferential grinding!

= Wear gloves!

= Read the safety instructions!

= Observe the minimum blade angle on reinforced grinding wheels!

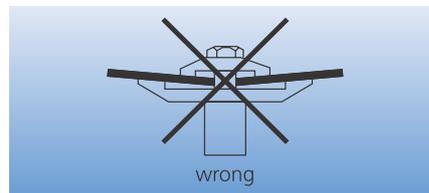

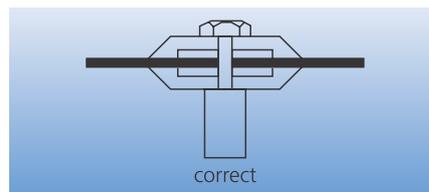

= Do not use if damaged!

### Mounting system

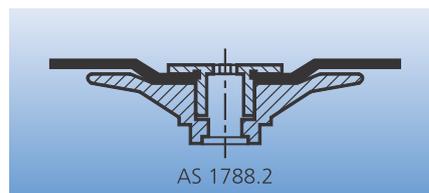

The safe use of PFERD tools is highly dependent on the mounting system.

Both flanges clamping a grinding tool must always have matching support diameters (according to EN 60745-2-3, EN 60745-2-22, ISO 11148-7, ANSI B7.1, AS 1788.1).

### Adapter for reinforced grinding wheels

In some countries, specific requirements apply with regard to the use of special flange or adapter systems on 178 and 230 mm dia. reinforced grinding wheels.

### PFERD description

E 178-7 A 30 N SG-INOX/22.23  
1 2 3 4 5 6 7 8 9

- Designation and shape of the tool**

N	soft	Aluminium/non-ferr. metals
P	medium-hard	Steel, stainless steels (INOX), castings, non-ferr. metals
Q	medium-hard	(INOX) castings, castings
R	hard	Stainless steel (INOX), stone
S	hard	Steel
<b>Special line SG-PLUS (SGP)</b>		
Q	medium-hard	(INOX) castings
S	hard	Stainless steel (INOX)
T	very hard	Steel

### 7. PFERD product line

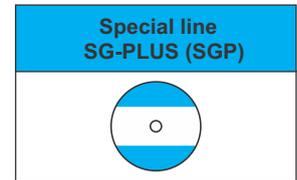

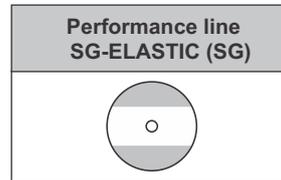

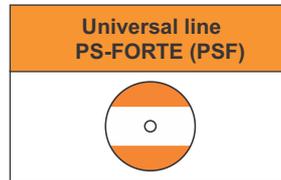

Universal line PS-FORTE (general)  
Performance line SG-ELASTIC (premium)  
Special line SG-PLUS (premium)

### 8. Material group

INOX  
INOX casting  
ALU

### Colour coding of the three product lines

### Colour coding for the recommended materials to be cut

Universal line PS-FORTE (PSF)	
Material = Colour	
	Steel black
	Stainless steel (INOX) blue
	Non-ferrous metals/ aluminium/ stone silver/green

Performance line SG-ELASTIC (SG)	
Material = Colour	
	Steel black
	Stainless steel (INOX) blue
	INOX castings blue/red
	Cast iron red
	Stone/cast iron green/red
	Stone green
	Non-ferrous metals/ aluminium silver

Special line SG-PLUS (SGP)	
Material = Colour	
	Steel black
	Stainless steel (INOX) blue
	INOX castings blue/red
	Cast iron red

**Designation according to EN 12413**  
41 A 46 R BF 80  
1 2 3 4 5 6

### 1. Designation and shape of the tool

41 = Flat type  
42 = Depressed centre type

### 2. Abrasive

A = Aluminium oxide  
C = Silicon carbide  
Z = Zirconia alumina  
ZA = Zirconia alumina/aluminium oxide

### 3. Grit size

Grit size according to ISO 8486

### 4. Hardness grade (disc properties)

The hardness is graded from soft to hard by means of letters in alphabetically ascending order (A to Z).

### 5. Bond

BF = Fibre-reinforced resinoid bond, woven or non-woven

### 6. Max. operating speed in [m/s]

### Achieve optimum performance with the special flange set

By applying the special PFERD clamping flange set, together with the CC-GRIND®-SOLID grinding disc, you will achieve the optimum grinding performance from the disc. The geometry of the cooling slits ensures high air flow. This reduces the thermal load on the grinding agent and the workpiece. The flange set also locates the disc in the optimum grinding position.

**Safety notes:**  
The maximum permitted peripheral speed is 80 m/s.

## PFERD quality

PFERD large diameter cut-off wheels are developed, manufactured and tested to the highest quality standards.

Research and Development, in-house machine and plant construction, as well as the continuous testing and further development of the quality and safety standards in our own laboratories guarantee the high PFERD quality.

PFERD quality management is certified according to ISO 9001.

## Applications

Abrasive cutting is one of the most powerful and cost-effective cutting processes and is used in the following areas:

- Rolling mills
- Foundries
- Machine engineering
- Steel construction
- Maintenance of rails
- Forging plants and their finishing processes
- Laboratories

## PFERD is a long-standing member of oSa

Together with other manufacturers, PFERD has voluntarily undertaken to produce quality tools conforming to the most exacting safety standards.

Member companies of oSa (The Organization for Safety of Grinding Tools) are committed to continuous product safety and quality monitoring.

PFERD tools carry the oSa mark.

## Safety standard

PFERD cut-off wheels conform to the highest safety requirements and are marked according to EN 12413 for grinding tools made of bonded abrasives.

## Advantages of large diameter cut-off grinding

- Universal cutting processes for all steels and castings, non-ferrous metal alloys, special alloys such as nickel- and titanium-based alloys, as well as materials on which sawing and flame cutting are difficult or impossible
- Due to smooth cutting surfaces and blank cuts in cold cutting-off, no post-processing is required
- Short cutting times regardless of the material quality
- Significantly lower burr formation with hot cutting-off than with hot sawing
- Lower noise levels than with hot sawing, for example:  
Hot cutting-off: 85 to 95 dBA  
Hot sawing: 105 to 110 dBA
- Consistent cut quality over the entire life of the cutting wheel due to its continuous self-sharpening qualities
- Cutting of already cooled rolled or forged parts in hot cut lines is possible

## Maximum operating speed

The maximum operating speed [m/s] is indicated on all product labels and product packs by an EN 12413 colour bar. The maximum permissible rotational speed specification applies to the nominal diameter of the unused wheels.

Maximum operating speed	Colour bar
80 m/s	red
100 m/s	green

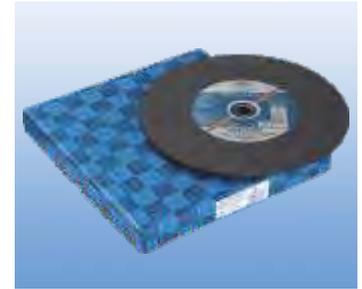

### PFERDVIDEO

You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

## PFERD packaging

PFERD supplies large diameter cut-off wheels in robust industrial packaging that protects the tools from damage. For packaging units please refer to the product tables. Important information, such as article number, description, EAN code and technical information can be found on the packaging labels.

## Safety notes

= Wear eye protection!

= Wear hearing protection!

= Wear a respirator!

= Wear gloves!

= Read the instructions!

= Do not use if damaged!

= Not permitted for hand-held or manually guided grinding!

### PFERD – Your partner for safe tools

PFERD industrial power brushes meet a high quality and safety standard which is constantly being inspected and further developed in our own laboratories. As one of the leading manufacturers of brush tools, PFERD fulfils the requirements of European standard EN 1083.

### Never exceed the permitted maximum RPM

In order to guarantee operating safety, the maximum permitted RPM written either on the brush, the label and in the catalogue must never be exceeded!

Please observe the following before use: The tool drive speed must not exceed the maximum permissible brush speed. Please refer to our PFERD Tool Manual 22 for more details.

### Read the safety recommendations!

Technical brushes must be used in a proper manner. For this reason, guidelines on the safe and economic use of PFERD brushes are in every packaging unit. They advise you how to increase your personal work safety.

= Wear gloves!

= Wear a respirator!

= Read the instructions!

= Wear hearing protection!

= Wear eye protection!

Use a protective machine cover!

### Standard INOX wire qualities

AISI	Short no. acc. to EN 10027-1	Material no. acc. to EN 10027-2
304	X5CrNi18-10	1.4301 (V2A)
301	X10CrNi18-8 (current standard)	1.4310 (V2A)
302	X12CrNi 17-7 (previous standard)	1.4310 (V2A)
316	X5CrNiMo17-12-2	1.4401 (V4A)
316	X3CrNiMo17-13-3	1.4436 (V4A)
316Ti	X6CrNiMoTi17-12-2	1.4571 (V4A)

#### Note

To avoid possible problems, it makes sense to run preliminary tests to check the corrosion-resistance of the workpiece.

#### Finishing

General cleaning of the workpieces after brushing is recommended to prevent loose particles sticking to the workpiece. For workpieces that are used in a heavily corrosive environment, processing with grinding tools or etching or passivation is recommended. This also applies when not only stainless steels but also non-alloyed steels are processed and it cannot be completely ruled out that particles will land on the stainless steel.

### Recommendation for use

#### Brush diameter

With hand-held tool drives, the brush diameter should never exceed 180 mm, regardless of the fill material.

#### Contact pressure and work position

incorrect (1)

correct (2)

Abrasion is done by the filament tips (fig. 2).

#### Exception:

Brushes with SiC fill: approx. 2-3 mm of the filament tips grind. When using brushes on stationary machines, always operate below the brush centre line (see fig. 2).

### Avoiding corrosion when brushing INOX components

Cause of corrosion	Solution
Structure changes through too much heat build-up	Avoid the heat build-up through: <ul style="list-style-type: none"> <li>Use of a lower speed</li> <li>Reduction in brushing pressure</li> <li>Oscillating brushing</li> </ul>
Apart from the trim all other brush parts are generally made of steel, (exception: INOX-TOTAL brush types), corrosion can occur through contact between these parts with the workpiece	<ul style="list-style-type: none"> <li>Use INOX-TOTAL type brushes.</li> <li>Avoid contact between the side discs and workpiece</li> <li>Use pencil brushes with plastic coatings</li> </ul>
Using the same tool for work on steel and INOX	<ul style="list-style-type: none"> <li>Do not use brushes which have already been used on steel, copper or other metals</li> <li>Do not process steel near INOX</li> </ul>
Wire particle residues in the surface (crack corrosion)	<ul style="list-style-type: none"> <li>Avoid a high brushing pressure</li> <li>Select a low speed</li> </ul>
Material removal rate is too low	Complete removal of structural changes by: <ul style="list-style-type: none"> <li>Extending brushing times</li> <li>Using grinding tools</li> </ul>

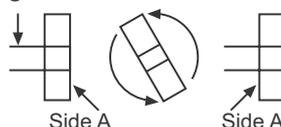

**PFERDVIDEO**  
You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

#### Visible trim lengths

Short filaments give a stiffer fill surface, resulting in more aggressive brushing action. Longer filaments are more flexible, giving a softer brush performance that produces a more uniform finish, even on non-homogeneous surfaces.

#### Self-sharpening effect

Output shaft

The self-sharpening effect can be improved by changing the brush operating direction.

#### Filament diameter

General rule:

**Thicker filament = aggressive, powerful brushing action**

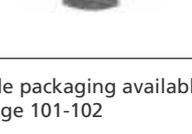

**Thinner filament = soft brushing action, finer surface finish**

On a brush with thicker filaments, fewer filament ends are in contact with the workpiece surface at the same time. This results in a more aggressive brushing action and coarser surface finish.

With thinner filaments, many filament ends are in contact. The result is a softer brushing action softer brushing action and finer surface finish. Generally, finer filament is more flexible and ensures a longer brush life.

## The PFERD product range includes three drive systems:

Air grinders	Electric grinders	Flexible shaft drives
		
<p>Single workplace, stationary</p> <p>High power output, low wear, long service life, economical air consumption, robust, hardwearing slide vane and turbine motors</p>	<p>Single workplace, flexible use on assembly sites</p> <p>High power output, low wear, long service life</p>	<p>Single workplace, stationary with a variety of tool applications, very easy to handle at high power output</p> <p>Very robust, low wear, long service life</p>
<p>Straight grinders</p> <p>Angle grinders</p> <p>Belt grinders</p> <p>-</p> <p>Special drives</p>	<p><b>Drive types</b></p> <p>Straight grinders</p> <p>Angle grinders</p> <p>Belt grinders</p> <p>Drum grinders</p> <p>-</p>	<p>Straight grinders</p> <p>Angle grinders</p> <p>Belt grinders</p> <p>Drum grinders</p> <p>Special drives</p>
<p>No risk of overloading, can be loaded up to machine standstill</p> <p>Optimum rotational speed and power ratios</p> <p>Good size to power output ratio</p> <p>Achieve high rotational speeds</p>	<p><b>Machine characteristics</b></p> <p>Overload protection, can briefly withstand up to four times the nominal output</p> <p>Optimal tuning possible for tool application</p> <p>Higher power output compared to air grinders at the same rotational speed</p> <p>Achieve constant speed, ideal for tools that need a constant rotational speed</p>	<p>Overload protection, can briefly withstand up to six times the nominal output</p> <p>Optimal tuning possible for tool application</p> <p>High motor power output, compact handpieces, high power transmission to the tool</p> <p>Cover large rotational speed ranges</p>
<p>Drive size and shape suitable for many applications</p>	<p><b>Ergonomics/handling</b></p> <p>Ergonomic drive shapes, easy to handle</p>	<p>Light arbors that are easy to handle for low-fatigue work</p>
<p>4,000 to 100,000</p>	<p><b>Speed range [RPM]</b></p> <p>750 to 33,000</p>	<p>0 to 40,000</p>
<p>Single-rotation speed</p>	<p><b>Speed variation</b></p> <p>Stepless, electronic</p>	<p>Stepless, electronic, alternatively using gears</p>
<p>Compressed air (6.3 bar)</p>	<p><b>Energy</b></p> <p>1-phase alternating current</p>	<p>1-phase alternating current, 3-phase alternating current</p>
<p>75 to 1,000</p>	<p><b>Power range [W]</b></p> <p>500 to 1,530</p>	<p>500 to 6,100</p>
<p>Safe energy form, no sparking</p>	<p><b>Safety</b></p> <p>Safeguard to prevent unintentional re-starting</p>	<p>42-volt type suitable for safe use in narrow, conductive spaces</p>
<p>Simple replacement of worn parts</p>	<p><b>Maintenance</b></p> <p>Simple replacement of carbon brushes</p>	<p>Maintenance by technically accomplished employees possible</p>

### Guarantee

Our PFERD guarantee for defects on electric and air grinders as also the required accessories is exercised in such a manner that all parts, which have material defects, will either be repaired or replaced free of charge. Warranty for these material defect claims shall be valid for a period of twelve (12) month at the most. This does not apply if longer periods of time are stipulated by law.

The warranty shall not cover damage caused by improper handling, the use of spare parts other than our own, or by repairs carried out in workshops other than our own.

### Technical changes

Technical developments and ergonomic improvements are continuously incorporated into our design and manufacture. We therefore reserve the right to make technical changes to our products.

In the event of changes to the design, we still ensure the availability of spare parts for four years.

### PFERDVIDEO

You will receive more information here or at [www.pferd.com.au](http://www.pferd.com.au)

Air grinders are the “top speed” machines amongst the drives. They achieve higher speeds in comparison to electric or flexible shaft drives. They have – when measured against their smaller size – a high power output. The robust and resistant sliding vane and turbine motors have a long service lifetime as well as being easy to service.

### Areas of application

Air grinders are very versatile. They are used especially in medium and large sized companies that have a compressed air network at their disposal.

They are used economically and reliably in series production and assembly lines.

### PFERD product range

PFERD offers straight, angle and belt grinders as well as special drives. PFERD air grinders are technically up to date and contain the latest ergonomic findings and requirements. They have been developed especially for the economic application of abrasives and cutting tools with defined geometries and cover a wide range of speeds (3,500 - 100,000 RPM) and performances (75 - 1,000 watts).

### Advantages

- Compact, ergonomic designed shape
- Low weight
- Technically up to date
- High power to weight performance
- Versatile in use
- Single speed RPM
- No danger from overloading, can be loaded up to machine standstill
- Housing insulated against cold and vibration
- Low-maintenance
- Easy to service
- Cost effective

## Criteria for selecting the optimum air grinder

The most important prerequisite for cost effective work is the selection of an optimal tool. After this, the choice of a suitable tool drive can be made. The following points have to be taken into consideration.

### 1. Design, shape and size

Every type of application places a specific demand on the shape and size of the tool drive. The various designs can be used for many different tasks: Depending on the dimensions, accessibility, type and frequency of the application, the ideal drive can be selected for the task in hand.

### 2. RPM

The drive should always be selected according to the RPM and cutting speed recommendations for the tool. Please refer to Tool Manual 22 sections 202 - 208 for these recommendations.

### 3. Power output

The drive unit's power output is the deciding factor for maintaining the RPM under load. The load is determined from the material to be machined, cutting capability of the tool and the grinding pressure.

### 4. Tool adapter

Depending on the PFERD tool you have selected, different tool adapters are available e.g. collets or threaded spindles. Every machine is allocated with matching collets.

We have explained the most important criteria here. Should you have any further questions, your PFERD sales advisor will be happy to help.

## Operates with or without oil

Turbine and sliding vane motors are labelled as follows:

Use only without oil.

Operates with or without oil.

Use only with oil.

## Advantages of oil-free compressed air

- User-friendly, protecting both people and the workshop environment.
- Reduces operation costs, because oil and fittings can be dispensed with.
- Avoids oily precipitation on the workpiece.

## Recommendations and prerequisites for an economically efficient use of air grinders

### 1. Air pressure

The machine should be run at an air pressure of 6 - 6.3 bar. A sufficient flow rate must be continuously ensured. Over-pressure leads to premature and higher levels of wear.

### 2. Air consumption

All data in this catalogue refers to air consumption in m<sup>3</sup> per minute [m<sup>3</sup>/min]. This is the volume of the air when expanded to atmospheric pressure. Unless otherwise indicated, the air consumption figures stated are always for a pressure of 6 bar and the maximum consumption of the machine in question. Non-regulated, pneumatic devices have the highest consumption at idling speed. Centrifugal-force controlled air-powered machines have the highest air consumption under full load.

### 3. Rotational speed (RPM)

All speeds are stated in revolutions per minute [RPM] and refer to the idling speed at a pressure of 6 bar. In the case of non-controlled machines, the speed under full load is approx. 50 % of the idling speed with centrifugal force-controlled machines the speed under full load is approx. 80 to 90 %.

### 4. Oil mist lubrication

An adequate oil mist lubrication is of crucial importance for proper machine operation should the machine require oil.

### 5. Machines running on oil-free compressed air

Machines marked oil-free can be used without oil mist lubrication. Units which can operate with or without oil have a minimal reduction in RPM/output performance when used without oil.

### 6. Maintenance unit

It is recommended to install a complete maintenance unit (dirt filter + pressure reducer + oiler) at a distance not exceeding 5m from the machine.

The size of the filter pores should be 3 - 5 µm. If in humid environments, air-powered machines should not be operated without oil.

### 7. Microfilter

Small high-speed grinders (approx. 40,000 RPM and over) should be used with a microfilter instead of the regular dirt trap.

### 8. Air supply hose

The supply hose must have an inner diameter that at least corresponds to those stated for the drives.

### 9. Valves and fittings

Always use extra fittings such as hose nozzles, self-closing valve couplings etc. with the largest possible inner diameter. It is advisable to use not more than one valve coupling to prevent unnecessary pressure losses.

### 10. Noise level

Air tool operators must always wear hearing protection, as the process noise emission of the machines exceeds 85 dB(A) in many cases, even though the idling noise of the machine remains clearly below this value.

### 11. Vibrations

PFERD air tools meet the requirements of the EC machinery directive regarding vibrations from hand-held or hand-guided machines. This is achieved through:

- Precise concentricity,
- vibration damping intermediate layers,
- vibration-insulated housings.

For protective gloves see page 106.

### 12. Maintenance and safety

We recommend

- to service the drives at regular intervals and
- to wear personal protective equipment

### Coated Materials Converted In Australia

PFERD Australia manufacture belts, discs, sheet and rolls which are made to order in our 'Coated Production Facility' located in Dingley, Victoria. A comprehensive range of coated material is available in both paper and cloth, designed to suit all types of applications. Available materials include aluminium oxide, zirconia, silicon carbide and ceramic in a variety of grit sizes.

If the product you need is not shown in our product guide, please contact our customer service on **1300 0 PFERD**.

### Safety Recommendations For The Use Of Abrasives

The recommendations shown should be followed by all users of abrasive products in the interest of their personal safety.

#### GENERAL PRINCIPLES OF SAFETY

Abrasive products improperly used can be very dangerous.

- Always follow the instructions provided by the abrasive product and machine supplier.
- Ensure that the abrasive product is suitable for its intended use. Examine all abrasive products for damage or defects before mounting.
- Follow the correct procedures for handling and storage of abrasive products.

Be aware of the hazards likely during the use of abrasive products and observe the recommended precautions to be taken:

- Bodily contact with the abrasive product at operating speed.
- Injury resulting from product breakage during use.
- Grinding debris, sparks, fumes and dust generated by the grinding process.
- Noise.
- Vibration.

Use only abrasive products conforming to the highest standards of safety. These products will bear the Australian standard AS: 1788 number and/or the inscription "oSa".

Employers should carry out a risk assessment on all individual abrasive processes to determine the appropriate protective measures necessary. They should ensure that their employees are suitably trained to carry out their duties.

This information is only intended to provide basic safety recommendations. More detailed information on the safe use of abrasive products, comprehensive Safety Codes are available from FEPA or your National Trade Association:

- FEPA Safety Code for Bonded Abrasives and Precision Superabrasives.
- FEPA Safety Code for Superabrasives for Stone and Construction.
- FEPA Safety Code for Coated Abrasives.

#### PRECAUTIONS AGAINST LIKELY HAZARDS

##### Bodily contact with the abrasive product

- Always take great care and attention when using abrasive products. Tie back long hair and do not wear loose clothing, ties and jewellery.
- Prevent accidental start-up of the machine before mounting or changing an abrasive product. Isolate machines from their power source where necessary.
- Never remove guards from machines where fitted and ensure they are in good condition and properly adjusted before starting the machine.
- Always use gloves and suitable clothing where the workpiece or machine is hand-held. For gloves, a minimum protection level of EN 388 Category 2 is recommended.
- After switching off the machine, ensure the product has come to rest before leaving the machine unattended. Injury caused by product breakage
- Always handle abrasives with great care, they are easily damaged. Examine all products for defects or damage before use.
- Store abrasives in dry, frost-free conditions avoiding wide variations in temperature. Ensure they are properly protected and supported to prevent damage and distortion.
- Coated abrasives should be stored at 18-22° C, 45-65% relative humidity.
- Abrasive belts should be hung on a rod or peg not less than 50mm diameter.
- Never use an abrasive product beyond its expiry date where marked. Observe the shelf life for the following specific products; Resinoid and Shellac products 3 years, Rubber products 5 years, Vitrified products 10 years.

Check abrasive product or package for any warnings or other safety information:

Not permitted for hand-held or manually-guided grinding

– Only permitted for use on totally enclosed machines

Not permitted for wet grinding

Read the instructions

Not permitted for face grinding

Wear eye protection

Do not use if damaged

Wear hearing protection

Only permitted with a back-up pad

Wear gloves

– Only permitted for wet cutting

Wear a respirator

### Injury caused by product breakage

- Ensure that the correct abrasive product is selected. Never use a product if it cannot be properly identified.
- Follow the instructions provided by the abrasive product or machine supplier when mounting abrasive products. Observe any mounting indications marked on the product such as direction of run or mounting position.
- Never force the abrasive product onto the mounting fixture or modify it to fit.
- Never exceed the maximum operating speed where specified.
- Check that the correct mounting devices are used and that they are undistorted, clean and free from burrs.
- Use mounting blotters where supplied.
- Do not tighten the mounting device excessively.
- After mounting or re-mounting an abrasive product, conduct a trial run at operating speed with the guard in place for at least 30 seconds, standing clear of the machine before use.
- Never remove guards from machines where fitted and ensure they are in good condition and properly adjusted.
- Ensure that the workpiece is secure and properly supported. Ensure that work rests are properly adjusted and secure.
- Never start the machine with the workpiece in contact with the abrasive product.
- Never apply excessive force or shock to the abrasive product or let it overheat.
- Do not grind on the part of the product that is not designed for the operation. Avoid grinding with the edge of abrasive belts, use the centre of the belt if possible.
- Avoid clogging and uneven wear to ensure that the abrasive product is working efficiently. Dress frequently where appropriate.
- Let the abrasive product stop naturally, not by applying pressure to its surface.
- Turn off and spin out excess coolant before stopping the machine.
- Do not leave abrasive belts under tension when not in use.

### Grinding debris – sparks, dust and fumes

- Exposure to dust generated from workpiece and/or abrasive materials can result in lung damage and/or other physical injury
- All dry grinding processes should be provided with adequate extraction facilities.
- Do not use abrasive products near flammable materials.
- The use of respirators complying with EN149 is recommended for dry grinding processes even if extraction systems are provided.
- Guards where provided should be adjusted to deflect sparks and debris away from the operator.
- Take additional measures to protect people working nearby.
- Eye protection is recommended for all machine applications for abrasives. For hand-held machines or workpiece, goggles or full-face shields are recommended.
- Eye protection with a minimum protection of EN166 Grade B is recommended.
- Ensure that the correct abrasive product is selected. An unsuitable product can produce excessive debris and dust.

### Noise

- Ear protection complying with EN352 is recommended for all applications where the workpiece or machine is hand-held, irrespective of the noise level.
- Ensure that the correct abrasive product is selected. An unsuitable product can produce excessive noise and vibration
- Processes where the workpiece or machine is hand-held can cause vibration injury.
- Action needs to be taken if tingling, pins and needles or numbness is experienced after 10minutes continuous use of the abrasive product.
- The effects of vibration are more pronounced in cold conditions so keep the hands warm and exercise hands and fingers regularly. Use modern equipment with low vibration levels.
- Maintain all equipment in good condition and stop the machine and have it checked if excessive vibration occurs.
- Use good quality abrasive products and keep them in good condition during their life.
- Maintain mounting flanges and back-up pads in good condition and replace if worn or distorted.
- Do not grip the workpiece or machine too tightly and do not exert excessive pressure on the abrasive product.
- Avoid continuous use of the abrasive product.
- Use the correct product. An unsuitable product can produce excessive vibration.
- Don't ignore the physical symptoms of vibration - seek medical advice.

### Disposal of abrasives

- Used or defective abrasives should be disposed in accordance with local or national regulations.
- Further information can be obtained from material safety data sheets provided by the supplier.
- Be aware that the abrasive product may be contaminated with material from the workpiece or process after use.
- Disposed abrasive products should be damaged to prevent them from being taken from waste skips and reused.

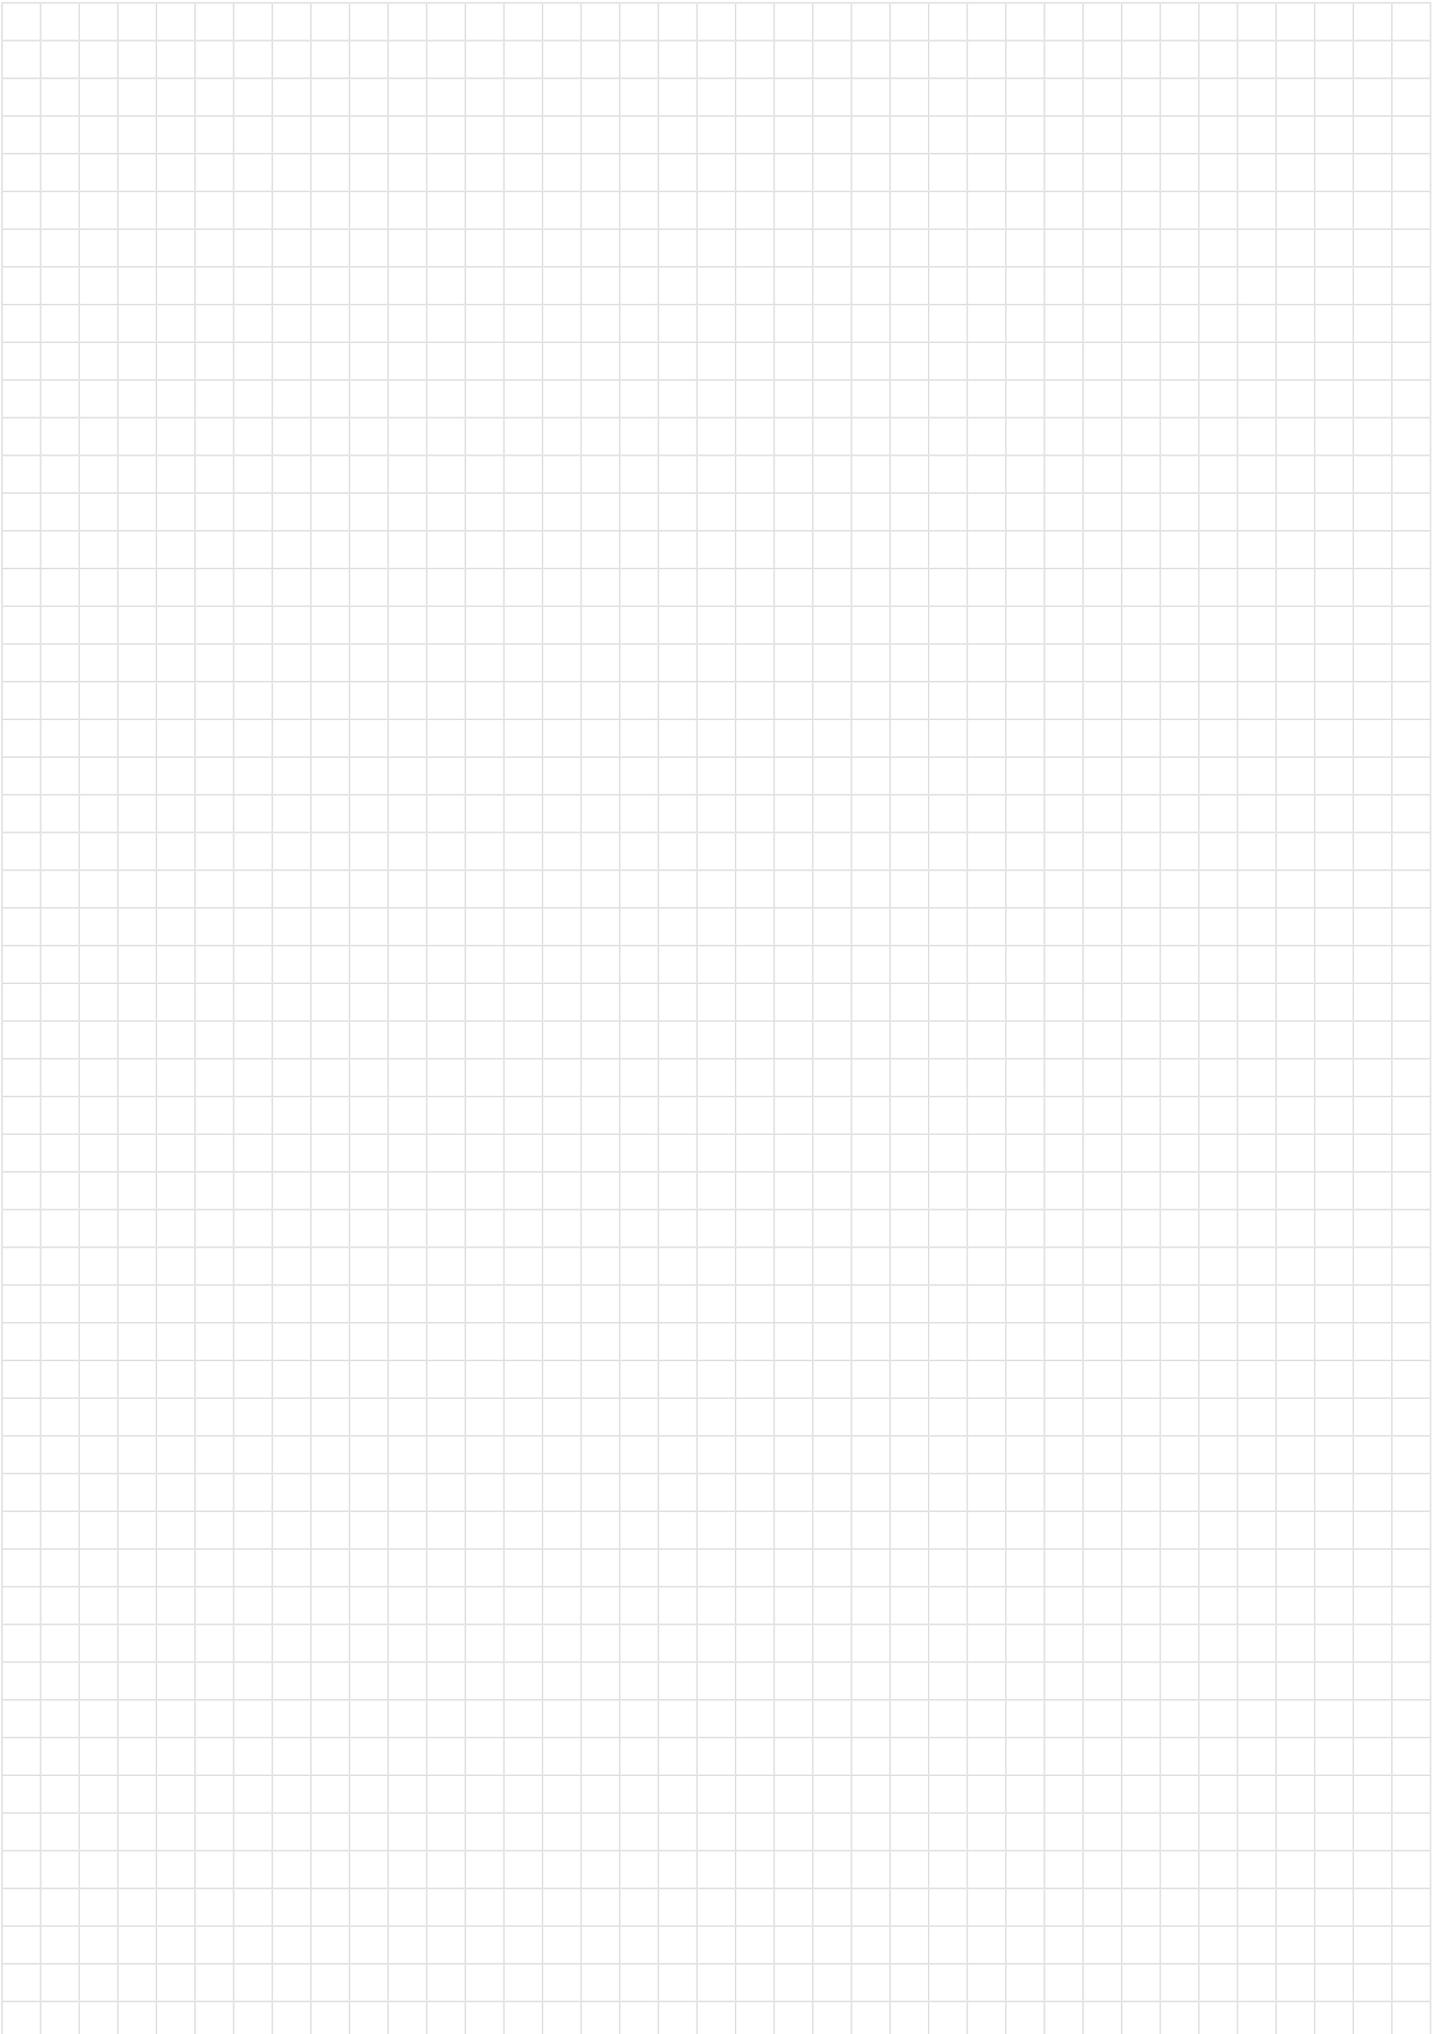

### Important Notice:

Every effort has been made to ensure that all information supplied in this "Safety Recommendations For The Use Of Abrasives" section is accurate and up to date. PFERD Australia Pty. Ltd. cannot accept responsibility for any error or omission, nor for any consequential loss or damage that may arise.

### Our Most Important Tool is Made of Paper

Across all industries, our PFERD Tool Manual 22 is recognised as the key reference for cutting, grinding, milling, filing, brushing and polishing. Your "quick product selection guide" navigation aid has been added to facilitate your search for the right tool. The first pages of our Tool Manual 22, in combination with the tabs, will first take you to the appropriate catalogue section.

At the start of each catalogue section, revised introductory pages will guide you to the optimal tool for your needs. The keyword index has been expanded to include many common terms and synonyms for available PFERD tools.

### PFERD Online - [www.pferd.com.au](http://www.pferd.com.au)

Visit PFERD Australia online at [www.pferd.com.au](http://www.pferd.com.au)

The web site includes videos, general product data, specifications, new products and much more. Keep up-to-date with the latest abrasive products and news or connect with PFERD on social media.

#### Symbols used in this publication

Symbol	Description
	Recommended for High Powered Angle Grinders.
	Recommended for Stainless Steel: Does not contain Iron, Sulphur or Chlorine fillers.
	New Product Range
	Point Of Sale Available

#### Trading Terms & Conditions / Product Warranty

For F.I.S. (free into store) deliveries Australia wide, PFERD distributor orders must be a minimum of \$300.00 net. Orders placed under \$300.00 net will incur a freight charge. For a copy of the current PFERD Australia trading terms & conditions, and or product warranty, please contact PFERD Australia Pty Ltd on 1300 073 373

#### Product Guide Pricing

All prices are effective from the 12th of February 2018. Prices and specifications are subject to change without notice. E & O.E. PFERD Australia Pty. Ltd. reserves the right to correct any errors or omissions. This is an uncontrolled document. **All prices are List each and exclude GST.**
